from every country also contributions from outside the traditional Formal Methods community were solicited. The recent innovation of including an Industrial Day as an important part of the symposium shows the strong commitment to involve industrial people more and more within the Formal Methods community. Even the traditional and rather fuzzy borderline between software engineering formal methods and methods and formalisms exploited in different fields of engineering was so what challenged.

FME 2002: Formal Methods - Getting IT Right Lars-Henrik Eriksson, Peter A. Lindsay, 2003-08-02
This volume contains the proceedings of the 2002 symposium Formal Methods in Europe FME 2002. The symposium was the 11 in a series that began with a VDM Europe symposium in 1987. The symposia are traditionally held every 18 months. In 2002 the symposium was held at the University of Copenhagen as part of the 2002 Federated Logic Conference FLoC 2002 which brought together in one event seven major conferences related to logic in computer science as well as their affiliated workshops, tutorials and tools exhibitions. Formal Methods Europe www.fmeurope.org is an independent association which aims to stimulate the use of and research on formal methods for software development. FME symposia have been notably successful in bringing together a community of users, researchers and developers of precise mathematical methods for software development. The theme of FME 2002 was Formal Methods Getting IT Right. The double meaning was intentional. On the one hand the theme acknowledged the significant contribution formal methods can make to Information Technology by enabling computer systems to be described precisely and reasoned about with rigour. On the other hand it recognized that current formal methods are not perfect and further research and practice are required to improve their foundations, applicability and effectiveness.

Teaching Formal Methods C. Neville Dean, Raymond T. Boute, 2004-10-11
Professional engineers can often be distinguished from other designers by the engineers' ability to use mathematical models to describe and analyze their products. This observation by Parnas describes the de facto professional standards in all classical engineering disciplines: civil, mechanical, electrical, etc. Unfortunately, it is in sharp contrast with current industrial practice in software design where mathematical models are hardly used at all, even by those who in Holloway's words aspire to be engineers. The rare exceptions are certain critical applications where mathematical techniques are used under the general name formal methods. Yet these same characteristics that make formal methods a necessity in critical

applications make them also advantageous in everyday software design at various levels, from design efficiency to software quality. Why then is education failing with respect to formal methods, failing to convince students, academics and practitioners alike that formal methods are truly pragmatic, failing to overcome a phobia of formality and mathematics, failing to provide students with the basic skills and understanding required

to adopt more mathematical and logical approaches to software development? Until education takes these failings seriously, formal methods will be an obscure byway in software engineering which in turn will remain severely impoverished as a result.
