Getinge K-series ,20??      **Manual of Neonatal Respiratory Care** Steven M. Donn, Mark C. Mammel, Anton H.L.C. van Kaam, 2022-05-09 Respiratory care is the largest overall component of neonatal intensive care and the fifth edition of the Manual of Neonatal Respiratory Care is the leading bedside guide for all aspects of respiratory care in the neonatal intensive care unit. Its easy-to-read outline format is simple yet comprehensive and covers all aspects of lung disease in the newborn infant including embryology, principles of mechanical ventilation, procedures and techniques, monitoring devices, adjunctive therapies, management of respiratory illness, complications, outcomes, and related issues. The latest edition includes fully revised and updated information, coverage on new equipment and devices, and an expanded authorship to enhance its international appeal. The new edition also features two new co-editors, Dr. Mark Mammel and Dr. Anton Van Kaam, internationally recognized experts in the field who bring a fresh perspective to the manual. Divided into sixteen sections, the book begins with a section on lung development and maldevelopment, specifically covering the development of the respiratory system, malformations, deformations, disorders of the neonatal airway, and developmental lung anomalies. The second section reviews the principles of mechanical ventilation, with coverage on such topics as spontaneous breathing, oxygen therapy, oxygen toxicity, pulmonary mechanics, and ventilator parameters. The third section of the manual outlines procedures and techniques, including neonatal resuscitation, laryngoscopy, and endotracheal intubation and tracheostomy. The following section dives into the monitoring of the ventilated patient, specifically focusing on continuous monitoring techniques, clinical controversies in pulse oximetry, and echocardiography. The next section spotlights noninvasive ventilatory techniques, such as nasal interfaces, humidified high-flow nasal cannula therapy, and sustained inflation. The sixth section of the manual focuses on ventilatory modes and modalities, with coverage on intermittent mandatory ventilation, pressure support, ventilation, and pressure control ventilation. The following section segues into high-frequency ventilation, reviewing general concepts, high-frequency jet ventilation, and high-frequency oscillatory ventilation. The eighth section centers around commonly used neonatal ventilators, such as the DRAEGER VN500 ventilator, the AVEA ventilator, and the Twinstream ventilator. The ninth section reviews adjunctive therapies, including hemodynamic support, nutritional support, the use of sedation, and analgesia, inhaled nitric oxide therapy, and ECMO. The tenth section shifts gears to spotlight the management of common neonatal respiratory diseases, with chapters on mechanisms of respiratory failure, tissue hypoxia, respiratory distress syndrome, persistent pulmonary hypertension, and pulmonary hypoplasia/agensis, among others. Section eleven reviews the etiology, pathogenesis, and management of bronchopulmonary dysplasia, as well as the long-term outcome of newborns with this chronic lung disease. The next section presents complications associated with mechanical ventilation, such as thoracic air leaks, neonatal pulmonary hemorrhage, and neurologic complications. The following two sections spotlight ethical, legal, and other considerations, among them nursing care of the ventilated infant, long-term ventilator dependency, and home ventilation.

withdrawal of ventilatory support and medical liability and risk management The fifteenth section focuses on research and literature with coverage on interpreting medical literature data collection and assessment of respiratory outcomes and contemporary classics in neonatal respiratory care The final section presents ventilatory case studies The text also features over 300 high yield radiographic images figures tables and algorithms Critical Care Manual of Clinical Nursing Procedures Suzanne Bench,Nicki Credland,Chris Hill,2024-11-04 Critical Care Manual of Clinical Nursing Procedures The second edition of Critical Care Manual of Clinical Nursing Procedures is a practical overview of essential procedures for the care of critically ill patients Beginning with chapters outlining the current scope of critical care the book adopts a systematic stage by stage approach from admission to discharge At each stage it provides insights into physiology key procedures and the relevant evidence base Now fully updated to incorporate the latest research and best practices this volume is poised to remain an indispensable resource for the next generation of critical care providers Readers of the second edition will find In depth beat by beat analysis of key procedures in critical care Interventions underpinned by the latest evidence Content aligned with the National Critical Care Competency Framework and endorsed by the British Association of Critical Care Nurses Critical Care Manual of Clinical Nursing Procedures is ideal for nurses working in a critical care unit nurses undertaking post qualification specialist courses in critical care or other healthcare professionals working as part of a critical care team **Patient Transport: Medical Critical Care - E-Book** Air & Transport Nurses Association (ASTNA),Allen Wolfe,Michael Frakes,Danny Nayman,2024-11-10 An ideal companion to the award winning Patient Transport Principles Practice 6th Edition this critical care transport text offers a unique focus on the critical care patient in transit addressing the needs of flight and ground transport registered nurses paramedics and those preparing for certification exams such as CFRN CTRN FP C and CCP C Authored by the esteemed Air and Surface Transport Nurses Association ASTNA this comprehensive guide is backed by the expertise of a leading body representing transport nurses worldwide making it an indispensable resource in the evolving landscape of critical care transport Coverage of injuries commonly encountered in flight and ground nursing includes pathophysiology assessment planning implementation and evaluation discussions Part I covers critical care medicine and Part II covers selected patient populations Meets the needs of all healthcare providers dedicated to expert care delivery in transport including nurses paramedics physicians respiratory therapists pilots mechanics and communication specialists Real life scenarios with updated technology demonstrate how to apply concepts to scenarios like those seen in practice Focus on the interprofessional and collaborative nature of transport emphasizes the importance of teamwork in ensuring successful patient outcomes Evolve companion website with 200 certification style questions provides valuable exam review and practice Endoscopic Cardiac Surgery Joseph Zacharias,2023-06-14 This book is unique in describing the practical considerations of endoscopic cardiac surgery It covers this topic from basic concepts such as patient selection to imaging and outlines the different approaches to particular endoscopic cardiac surgical procedures As there is an increasing
