Play and Exploration in Children and Animals Thomas G. Power,1999-11-01 Play is a paradox Why would the young of so many species the very animals at greatest risk for injury and predation devote so much time and energy to an activity that by definition has no immediate purpose This question has long puzzled students of animal behavior and has been the focus of considerable empirical investigation and debate In this first comprehensive and state of the art review of what we have learned from decades of research on exploration and play in children and animals Power examines the paradox from all angles Covering solitary activity as well as play with peers siblings and parents he considers the nature development and functions of play as well as the gender differences in early play patterns A major purpose is to explore the relevance of the animal literature for understanding human behavior The nature and amount of children s play varies significantly across cultures so the author makes cross cultural comparisons wherever possible The scope is broad and the range multidisciplinary He draws on studies by developmental researchers in psychology and other fields ethologists anthropologists sociologists sociolinguists early childhood educators and pediatricians And he places research on play in the context of research on such related phenomena as prosocial behavior and aggression Finally Power points out directions for further inquiry and implications for those who work with young children and their parents Researchers and students will find *Play and Exploration in Children and Animals* an invaluable summary of controversies methods and findings practitioners and educators will find it an invaluable compendium of information relevant to their efforts to enrich play experiences Design Thinking Research Christoph Meinel,Larry Leifer,2023-09-19 Extensive research conducted at the Hasso Plattner Design Thinking Research Program at Stanford University in Palo Alto California USA and at the Hasso Plattner Institute in Potsdam Germany has yielded valuable insights on why and how design thinking works The participating researchers have identified metrics developed models and conducted studies which are featured in this book and in the previous volumes of this series This volume provides readers with tools to bridge the gap between research and practice in design thinking together with a range of real world examples Several different approaches to design thinking are presented while acquired frameworks are employed to understand team dynamics in design thinking The contributing authors introduce readers to new approaches and fields of application and show how design thinking can tap the potential of digital technologies in a human centered way The book also presents new ideas on neuro design from Stanford University and the Hasso Plattner Institute in Potsdam inviting readers to consider newly developed methods and how these insights can be applied to different domains Design thinking can be learned It has a methodology that can be observed across multiple settings Accordingly readers can adopt new frameworks to modify and update their current practices The research outcomes gathered here are intended to inform

and provide inspiration for all those seeking to drive innovation be they experienced design thinkers or newcomers It is the last in a series of 14 volumes published over the past 14 years reflecting the successes of the HPI Stanford Design Thinking Research Program Many thanks to the Hasso Plattner Foundation for its valued support

Drawing & the Blind John Miller Kennedy, 1993-01-01 This groundbreaking work explores how children and adults who have been blind since birth can both perceive and draw pictures John M Kennedy a perception psychologist relates how pictures in raised form can be understood by the blind and how untrained blind people can make recognizable sketches of objects situations and events using new methods for raised line drawing According to Kennedy the ability to draw develops in blind people as it does in the sighted His book gives detailed descriptions of his work with the blind includes many pictures by blind children and adults and provides a new theory of visual and tactile perception applicable to both the blind and the sighted to account for his startling findings Kennedy argues that spatial perception is possible through touch as well as through sight and that aspects of perspective are found in pictures by the blind He shows that blind people recognize when pictures of objects are drawn incorrectly According to Kennedy the incorrect features are often deliberate attempts to represent properties of objects that cannot be shown in a picture These metaphors as Kennedy describes them can be interpreted by the blind and the sighted in the same way Kennedy's findings are vitally important for studies in perceptual

and cognitive psychology the philosophy of representation and education His conclusions have practical significance as well offering inspiration and guidelines for those who seek to engineer ways to allow blind and visually impaired people to gain access to information only available in graphs figures and pictures
