Huber Mini Chiller Manual:

Inclusion Bodies Julian Kopp, Oliver Spadiut, 2023-01-19 This detailed volume presents a series of protocols dealing with different aspects of inclusion body (IB) processing from cloning procedures to purification of refolded product. Commencing with chapters on upstream processing looking into different expression strategies for IB production, the book continues with downstream applications highlighting early protein purification and subsequent analytics as well as success stories of IB-based processes. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step and readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. *Inclusion Bodies: Methods and Protocols* serves as an ideal resource for facilitating diverse aspects of IB processing.

Search for Higgs Boson Decays to Charm Quarks with the ATLAS Experiment and Development of Novel Silicon Pixel Detectors Maria Mironova, 2023-07-20 This book explores the Higgs boson and its interactions with fermions as well as the detector technologies used to measure it. The Standard Model of Particle Physics has been a groundbreaking theory in our understanding of the fundamental properties of the universe, but it is incomplete, and there are significant hints which require new physics. The discovery of the Higgs boson in 2012 was a substantial confirmation of the Standard Model, but many of its decay modes remain elusive. This book presents the latest search for Higgs boson decays into charm quarks using a proton-proton collision dataset collected by the ATLAS experiment at the Large Hadron Collider (LHC). This decay mode has yet to be observed and requires advanced machine learning algorithms to identify charm quarks in the experiment. The results provide an upper limit on the rate of Higgs boson decays to charm quarks and a direct measurement of the Higgs boson coupling strength to charm quarks. The book also discusses the future of particle physics and the need for significant improvements to the detector to cope with increased radiation damage and higher data rates at the High Luminosity LHC. It presents the characterization of the ATLAS pixel detector readout chip for the inner detector upgrade (ITk). The chip was subjected to irradiations using X-rays and protons to simulate the radiation environment at the HL-LHC. The tests showed that all readout chip components, including the digital logic and analogue front end, are sufficiently radiation tolerant to withstand the expected radiation dose. Finally, this book describes monolithic pixel detectors as a possible technology for future pixel detectors. This book is ideal for individuals interested in exploring particle physics, the Higgs boson, and the development of silicon pixel detectors.
