**Mental Imagery** Joel Pearson,Stephen M. Kosslyn, Our ability to be conscious of the world around us is often discussed as one of the most amazing yet enigmatic processes under scientific investigation today However our ability to imagine the world around us in the absence of stimulation from that world is perhaps even more amazing This capacity to experience objects or scenarios through imagination that do not necessarily exist in the world is perhaps one of the fundamental abilities that allows us successfully to think about plan run a dress rehearsal of future events re analyze past events and even simulate or fantasize abstract events that may never happen Empirical research into mental imagery has seen a recent surge due partly to the development of new neuroscientific methods and their clever application but also due to the increasing discovery and application of more objective methods to investigate this inherently internal and private process As the topic is cross hosted in *Frontiers in Perception Science* and *Frontiers in Human Neuroscience* we invite researchers from different fields to submit opinionated but balanced reviews new empirical theoretical philosophical or technical papers covering any aspect of mental imagery In particular we encourage submissions focusing on different sensory modalities such as olfaction audition somatosensory etc Similarly we support submissions focusing on the relationship between mental imagery and other neural and cognitive functions or disorders such as visual working memory visual search or disorders of anxiety Together we hope that collecting a group of papers on this research topic will help to unify theory while providing an overview of the state

of the field where it is heading and how mental imagery relates to other cognitive and sensory functions **New England Journal of Education** ,1897 **Frontiers in Public Health: Editor's pick 2022-23** Paolo Vineis,2024-11-01 Welcome to our Editor's Pick collection for Frontiers in Public Health showcasing a curated selection of the most impactful and innovative articles in the field. **Adolescence Mental Health in School and University** Iman Permana ,Herni Susanti,2024-07-29 A school whether run by the government or a private institution is established to prepare adolescents for adulthood. In some regions, some religious societies have established a comprehensive educational institution supported by their religious competencies requirement in their curriculum along with the national curriculum. Adolescence is a period of life that ranges from 10 to 19 years old and expands from school to the early phase of university. Adolescents are considered highly susceptible to mental health issues. Anxiety, depression, behavioral disorders, and suicidal attempts have been shown to increase before the age of 24. There is a myriad of factors that can contribute to the development of mental health disorders in this context, including family parenting style and bullying from peers and teachers. Failing to address contributing factors may hinder adolescents from fulfilling and sustaining healthy and productive adult lives. *Nutritional Toxicity: Physiology, Nutrition, and Human Health* Tingting Ju, Siddika Yalcin, Misha Vrolijk,2025-08-20 Food is a basic human need. Our diet provides the human body with nutrients and other elements that are necessary for maintaining a good health. Sufficient intake of nutrients is therefore considered vital. However, in the past years, the environmental impact on our food and an increased adherence to the Westernized diet which consists of ultra-processed foods have negatively impacted the quality of our food and thus also our nutrition. In addition to these influences, today's food is produced differently and food patterns change and shift towards more sustainable diets. A major change from animal meat to more plant-based foods is occurring whilst new protein sources are introduced such as insects, seaweed, and artificial protein sources. Food additives such as artificial sweeteners are also becoming increasingly

popular These environmental and sustainable developments have led to the introduction of new foods different proportions of nutrients in our foods and new elements to our food that altogether are potentially harmful for our health Growing interest in the use of nutrient supplements also introduces potential risks with consuming levels of nutrients above those deemed tolerable or safe Therefore having a better understanding of nutritional toxicity in the context of the modern food industry becomes fundamental
