Many students continue to struggle in high school math courses because they failed to master the basic mathematical skills REA's new Ready Set Go Workbook series takes the confusion out of math helping students raise their grades and score higher on important exams including the NJ HSPA. What makes REA's workbooks different? For starters, students will actually like using them. Here's why: Math is explained in simple language in an easy-to-follow style. The workbooks allow students to learn at their own pace and master the subject. More than 20 lessons break down the material into the basics. Each lesson is fully devoted to a key math concept and includes many step-by-step examples. Paced instruction with drills and quizzes reinforces learning. The innovative Math Flash feature offers helpful tips and strategies in each lesson, including advice on common mistakes to avoid. Skill scorecard measures the student's progress and success. Every answer to every question in every test is explained in full detail. A final exam is included so students can test what they've learned. When students apply the skills they've mastered in our workbooks, they can do better in class, raise their grades, and score higher on the all-important HSPA. Some of the math topics covered in the Geometry Workbook include: Basic Properties of Points, Rays, Lines, and Angles; Measuring Line Segments and Angles; Perimeter of Polygons; Triangles; Circles; Quadrilaterals; and more. Whether used in a classroom for home or self-study or with a tutor, this workbook gets students ready for important math tests and exams, set to take on new challenges, and helps them go forward in their studies.

Geometry Harold R. Jacobs, 2003-03-14
Harold Jacobs's Geometry created a revolution in the approach to teaching this subject, one that gave rise to many ideas now seen in the NCTM Standards. Since its publication, nearly one million students have used this legendary text. Suitable for either classroom use or self-paced study, it uses innovative discussions, cartoons, anecdotes, examples, and exercises that unfailingly capture and hold student interest. This edition is the Jacobs for a new generation. It has all the features that have kept the text in class by itself for nearly 3 decades, all in a thoroughly revised, full-color presentation that shows today's students how fun geometry can be. The text remains proof-based, although the presentation is in the less formal paragraph format. The approach focuses on guided discovery to help students develop geometric intuition.

Using only a pencil, compass, and straightedge, students begin by drawing lines bisecting angles and reproducing segments. Later, they do sophisticated constructions involving over a dozen steps. When they finish, students will have been introduced to 134 geometric terms and will be ready to tackle formal proofs. Includes Book 8 of Key to Geometry.
