Updated coverage of the exploration-exploitation problem in ADP, now including a recently developed method for doing active learning in the presence of a physical state using the concept of the knowledge gradient. A new sequence of chapters describing statistical methods for approximating value functions, estimating the value of a fixed policy, and value function approximation while searching for optimal policies. The presented coverage of ADP emphasizes models and algorithms focusing on related applications and computation while also discussing the theoretical side of the topic that explores proofs of convergence and rate of convergence. A related website features an ongoing discussion of the evolving fields of approximation, dynamic programming, and reinforcement learning, along with additional readings, software, and datasets.
