

# Home Energy Audit

Simple things that you can do around your home to save energy.

## QUICK TIPS

- 1 Check for air leaks
- 2 Use less heated water

- 3 Use energy efficient lighting
- 4 Program your thermostats

### Outlet and Switches

Air can escape from behind your outlets and light switches causing up to a 5% heat loss in your home. Add foam draft stoppers behind your outlets and switch covers to reduce heat loss through these areas.

### Lighting

Replace your old incandescent bulbs with energy efficient CFLs or LED bulbs.

### Programmable Thermostats

You can save 2% of your energy use per degree that you drop your thermostat. Program your thermostat 10° lower when you leave the house or while you are sleeping.

### Door Weatherstripping

If you see daylight coming from under your exterior doors you're losing heating and cooling. Install a threshold or use a door draft snake to block the air from escaping.

### Attic Ducts

You can lose up to 40% of your heating and cooling through improperly insulated ductwork. Insulate with special insulation with at least an R-6 rating. Use metal-foil-faced tape or mastic-based duct sealant.

### Windows

Insulate around your windows or install a window film insulating kit to prevent heat loss.

### Faucets

Washing a sink full of dishes with a standard 2.2 GPM (gallons per minute) faucet aerator can use about 20 gallons of water. By switching to a more efficient 1.5 GPM aerator you can reduce the amount of heated water used while rinsing dishes. Always use cold water whenever possible.

### Showerheads

Some showerheads use up to 50 gallons of hot water per 10 minute shower. Switching to a more efficient showerhead (2.5 GPM or less) can save you at least half of the amount of energy required to heat the water used for your shower.

### Furnace Filter

Remember to change your furnace filter every 4-6 weeks during the colder seasons to keep your furnace running as clean and efficient as possible.

**You can save up to 30% on your energy costs.**
