Fluid Mechanics and Fluid Power (Vol. 1) Suvanjan Bhattacharyya, Himadri Chattopadhyay, 2023-03-29 This book presents the select proceedings of the 48th National Conference on Fluid Mechanics and Fluid Power FMFP 2021 held at BITS Pilani in December 2021 It covers the topics such as fluid mechanics measurement techniques in fluid flows computational fluid dynamics instability transition and turbulence

fluid structure interaction multiphase flows micro and nanoscale transport bio fluid mechanics aerodynamics turbomachinery propulsion and power The book will be useful for researchers and professionals interested in the broad field of mechanics

Gas-Phase Combustion Chemistry W.C., Jr. Gardiner, 2012-12-06 This book differs from its out of print 1984 predecessor primarily by lacking theoretical chapters on combustion modeling and elementary reaction rate coefficients While noteworthy advances in these subjects have been made since 1984 it was decided to mention theory in this book only where appropriate in chapters describing combustion chemistry itself Otherwise space limitation would have forced us to discuss only new developments in theoretical areas thereby abandoning our goal of keeping this book readable by newcomers to the field of combustion modeling Contemporary modeling and rate coefficient theory as applied to combustion deserve a book of their own A second omission is a chapter devoted to reviewing the elementary reactions that contribute to the combustion chemistry of hydrogen carbon monoxide and hydrocarbon or alternate fuels Readers looking for guidance to the current knowledge we have in this area will find a broad outline and extensive references to the review and archival literature in Chapter 1 where the essential features of combustion chemistry modeling are surveyed

Major Hazards Onshore and Offshore II Norbert Gibson, 1995 This text presents papers from the second conference on major hazards onshore and offshore held in Manchester in October 1995 Contents include papers on gas dispersion and explosion modelling fire and explosions management of safety and human factors and risk analysis and hazard assessment

Mathematical Modelling of Gas-Phase Complex Reaction Systems: Pyrolysis and Combustion, 2019-06-06 Mathematical Modelling of Gas Phase Complex Reaction Systems Pyrolysis and Combustion Volume 45 gives an overview of the different steps involved in the development and application of detailed kinetic mechanisms mainly relating to pyrolysis and combustion processes The book is divided into two parts that cover the chemistry and kinetic models and then the numerical and statistical methods It offers a comprehensive coverage of the theory and tools needed along with the steps necessary for practical and industrial applications Details thermochemical properties and ab initio calculations of elementary reaction rates Details kinetic mechanisms of pyrolysis and combustion processes Explains experimental data for improving reaction models and for kinetic mechanisms assessment Describes surrogate fuels and molecular reconstruction of hydrocarbon liquid mixtures Describes pollutant formation in combustion systems Solves and validates the kinetic mechanisms using numerical and statistical methods Outlines optimal design of industrial burners and optimization and dynamic control of pyrolysis furnaces Outlines large eddy simulation of turbulent reacting flows

Computer Generated Physical Properties Stan Bumble, 1999-06-01 Computer Generated Physical Properties offers the environmental scientist a basis to predict the properties of molecules and reengineer them to remove those properties that are harmful to the environment This technology is currently used in other fields and is now becoming popular in the environmental engineering field because of its pollution prevention and waste reduction capabilities This book interdisciplinary in scope treats the physical properties of matter as generated by computers

It covers a wide variety of topics pointing towards synthesizing new molecules to substitute for reactants intermediaries and products in industrial processes with better physical and environmental properties than the original The author achieves this with a spreadsheet program called SYNPROPS that operates on a PC computer with optimization features A radar type graph one for each property visually sorts the various groups in order of their contribution to the property creating the necessity for a computer to obtain answers for the structure of the optimum molecules for substitution or synthesis The author discusses applications to biologically active molecules without side effects including antineoplastic drugs Additionally he demonstrates model compounds and the applications of SYNPROPS optimization and substitution This book has everything you need to know about deriving properties and combinatorial chemistry from molecular structure *Combustion Engineering, Second Edition* Kenneth W. Ragland, Kenneth M. Bryden, 2011-06-15
