Design Change to Fishery Independent Surveys: When to Adjust and How to Account For It Fabio Campanella, Ben Scoulding, Nathan Bacheler, Kyle Shertzer, 2025-03-07 Fishery independent surveys provide crucial information for monitoring and assessing marine fish stocks Their utility can largely be attributed to sampling procedures that are consistent across space and time such that observed dynamics can reasonably be assumed to reflect those of the population or

community being studied. However, sometimes changes to the survey design become desirable or necessary. They may be desirable if the benefits of modification outweigh the benefits of consistency for example with improvements in sampling technology or efficiency, revised survey priorities or increased funding that allows for greater spatial coverage or temporal resolution. In other cases, changes to the survey design may not be desirable but necessary for example when specific supplies or equipment become unobtainable or with reductions in funding, ship time or human resources.

Handbook of Digital Technologies in Movement Disorders Roongroj Bhidayasiri, Walter Maetzler, 2024-01-20. Over the past few years, there have been fundamental changes in the diagnosing and treating patients with chronic diseases significantly affecting management of neurological movement disorders. In addition, the health and fitness sector developed several devices to better classify, track and potentially treat chronic diseases. Both handling and interpreting these large datasets has been revolutionized by machine and deep learning approaches leading to new and more effective therapies resulting in longer survival rates. *Handbook of Digital Technologies in Movement Disorders* aims to unite these factors to provide a comprehensive guide to patient focused treatments for movement disorders. This book is divided into five distinct sections starting with an introduction to digital technologies, concepts and terminologies. The following section reviews various perspectives on technology in movement disorders including patient and medical professionals. The third section presents technologies used in detecting, measuring progression and determining response to treatments. This is followed by reviewing the technology used in various treatments of movement disorders including assistive and robotic technologies. Finally, the last section examines the challenges with technology including privacy and other ethical issues. Reviews different stakeholders' perspectives on technology in movement disorders. Presents technological advancements for diagnosing, monitoring and managing Parkinson's disease. Discusses challenges with implementing technology into treatment.

Geographical Information Systems Theory, Applications and Management Cédric Grueau, Jorge Gustavo, 2016-01-25. This book constitutes the refereed proceedings of the International Conference on Geographical Information Systems Theory Applications and Management held in Barcelona, Spain, in April 2015. The 10 revised full papers presented were carefully reviewed and selected from 45 submissions.
