- Ventricular hypertrophy
- Central blood pressure and its measurement
- Pathophysiology of arterial stiffness and relevant measurement techniques
- Blood pressure during exercise and its clinical importance
- The effects of prolonged acute exercise on cardiac arterial and hemostatic function
- Endothelial function including the impact of aging and sex and potential mechanisms
- An individual's response and adaptation to both resistance training and aerobic training

The second edition of *Advanced Cardiovascular Exercise Physiology* uses a larger format to showcase its richly illustrated contents Updated figures and graphics visually elucidate physiological mechanisms to depict exercise responses and training adaptations Each chapter begins with chapter objectives and ends with a summary to help students retain important content Fifteen case studies are included in the text to showcase the application of chapter material Key terms are boldfaced throughout the text and are defined at the end of each chapter In addition sidebars describe real world examples and applications This text is divided into two sections The first section offers a concise explanation of the structure and function of each component of the cardiovascular system In the second section readers encounter a detailed discussion of the acute and chronic effects of aerobic and resistance exercise on cardiac function vascular function and hemostatic variables *Advanced Cardiovascular Exercise Physiology* Second Edition provides a framework for understanding how the components of the cardiovascular system cooperate to support exercise and how those components adapt to and benefit from a systematic program of exercise training

Assessing Academic Literacy in a Multilingual Society Albert Weideman,John Read,Theo du Plessis,2020-11-02 South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy The dominant medium of instruction in the universities is English and to a much lesser extent Afrikaans but only a minority of the national population are native speakers of these languages Nine other languages can be media of instruction in schools which makes the transition to tertiary education difficult enough in itself for students from these schools The focus of this book is on procedures for assessing the academic language and literacy levels and needs of

students not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience
