Chinese Research Perspectives on Educational Development, Volume 4 Dongping Yang, 2019-09-24 This collection of articles selected from Blue Book of Chinese Education 2015 published in Chinese reviews the condition of China's education development in 2014. The wide range of topics covered in this volume fall under two major themes: reform and equity. Chapters on reform focus on the college entrance exam Gaokao, secondary vocational education, senior high school education provincially and locally funded colleges, private universities, and junior high school admissions policies. Chapters in the second half of the book provide readers with an in-depth account of efforts made to improve equity in special and early childhood education, study abroad preparation classes, and rural education. The appendix includes a report of budgetary expenditure on education and a chronology of major events.

Evaluating Language Assessments Antony John Kunnan, 2017-07-06
Evaluating Language Assessments offers a comprehensive overview of the theoretical bases and research methodologies for the evaluation of language assessments and demonstrates the importance of a fuller understanding of this widely used evaluative tool. The volume explores language assessment evaluation in its wider political, economic, social, legal, and ethical contexts while also illustrating quantitative and qualitative methods through discussions of key research studies. Suitable for students in applied linguistics, second language acquisition, and language assessment and education, this book makes the case for a clear and rigorous understanding of the theoretical and methodological underpinnings of language assessment evaluation in order to achieve fair assessments and just institutions.

Common Sense Education Ernest J. Zarra III, 2016-08-16 The 2015 passage of the Every Student Succeeds Act (ESSA) has again changed education for public schools and communities. Common Core is now optional, and the role of Secretary of Education has been limited by no longer incentivizing states as done under Common Core. This book analyzes the new direction today's schools must pursue for student learning and their success beyond high school. States and local educational agencies are once again empowered and will have more authority over curriculum and assessment. Common Sense Education includes samples from these states' ideas from several universities which are retooling their teacher education programs and focusing on teacher excellence, as well as schools recalibrating their programs for student learning. This book advocates for common sense education, uses a national survey to provide parent and teacher perspectives, and suggests a new paradigm for exciting twenty-first century high schools.

Development of executive function during childhood Yusuke Moriguchi, Philip D. Zelazo, Nicolas Chevalier, 2016-04-01 Executive function refers to the goal-oriented regulation of one's own thoughts, actions, and emotions. Its importance is attested by its contribution to the development of other cognitive skills, e.g., theory of mind, social abilities, e.g., peer interactions, and academic achievement, e.g., mathematics, and by the consequences of deficits in executive function, which are observed in a wide range of developmental disorders such as attention deficit hyperactivity disorder and autism. Over the last decade, there has been growing interest in the development of executive function and an expanding body of

research has shown that executive function develops rapidly during the preschool years with adult level performance being achieved during adolescence or later This recent work together with experimental research showing the effects of interventions targeting executive function has yielded important insights into the neurocognitive processes underlying executive function Given the complexity of the construct of executive function however and the multiplicity of underlying processes there are often inconsistencies in the way that executive function is defined and studied This inconsistency has hampered communication among researchers from various fields This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function Researchers using various methods including behavioral experiments neuroimaging eye tracking computer simulation observational methods and questionnaires are encouraged to contribute original empirical research In addition to original empirical articles theoretical reviews and opinions perspective articles on promising future directions are welcome We hope that researchers from different areas such as developmental psychology educational psychology experimental psychology neuropsychology neuroscience psychiatry computational science etc will be represented in the Research Topic
