Chapter 2 MANUFACTURING OPERATIONS

REVIEW QUESTIONS

2.1 What is manufacturing?

Answer: Two definitions are given in the text. The technological definition is the following: Manufacturing is the application of physical and chemical processes to alter the geometry, properties, and/or appearance of a given starting material to make parts or products. Manufacturing also includes the joining of multiple parts to make assembled products. The economic definition is the following: Manufacturing is the transformation of materials into items of greater value by means of one or more processing and/or assembly operations.

2.2 What are the three basic industry categories?

Answer: The three basic industry categories are (1) primary industries, which are those that cultivate and exploit natural resources, such as agriculture and mining; (2) secondary industries, which convert the outputs of the primary industries into products; they include manufacturing, construction, and power generation; and (3) tertiary industries, which constitute the service sector of the economy; examples include banking, retail, transportation, education, government.

2.3 What is the difference between consumer goods and capital goods?

Answer : Consumer goods are products that are purchased directly by consumers, such as cars, personal computers, TVs, tires, toys, and tennis rackets. Capital goods are products purchased by other companies to produce goods and supply services. Examples include commercial aircraft, mainframe computers, machine tools, railroad equipment, and construction machinery.

2.4 What is the difference between a processing operation and an assembly operation?

Answer: A processing operation transforms a work material from one state of completion to a more advanced state that is closer to the final desired part or product. It adds value by changing the geometry, properties, or appearance of the starting material. An assembly operation joins two or more components to create a new entity, called an assembly, subassembly, or some other term that refers to the joining process.

2.5 Name the four categories of part-shaping operations, based on the state of the starting work material.

Answer: The four categories are (1) solidification processes, (2) particulate processing, (3) deformation processes, and (4) material removal processes.

Groover Solution Manual:

Automation, Production Systems, and Computer-integrated Manufacturing Mikell P. Groover, 2008 This exploration of the technical and engineering aspects of automated production systems provides a comprehensive and balanced coverage of the subject It covers cutting edge technologies of production automation and material handling and how these technologies are used to construct modern manufacturing systems Fundamentals of Modern Manufacturing Mikell P. Groover, 2010-01-07

Engineers rely on Groover because of the book's quantitative and engineering oriented approach that provides more equations and numerical problem exercises The fourth edition introduces more modern topics including new materials processes and systems End of chapter problems are also thoroughly revised to make the material more relevant Several figures have been enhanced to significantly improve the quality of artwork All of these changes will help engineers better understand the topic and how to apply it in the field **Solutions Manual** Mikell P. Groover, 2000-09 **IT-Based**

Management: Challenges and Solutions Joia, Luiz Antonio, 2002-07-01 The main scope of this book is to show how IT has created a mandate to management to develop new business models and frameworks based on the important role of IT The chapters within IT Based Management Challenges and Solutions tackle the role and impact of IT on strategy and resulting new models to be used in this context In addition the book proposes new models based on the pervasive role IT exercises in the current business arena **The Total Camping Manual** T. War Department,1945 Solutions Manual : Fundamentals of Modern Manufacturing M P. Groover,2002 **Enabling Automation of Composite Manufacturing through the Use of Off-The-Shelf Solutions** Andreas Björnsson,2014-11-10 Composite materials offer an appealing combination of low weight and high strength that is especially sought after in high performance applications The use of composite materials has and is continuing to increase and the use of the material has been shown to provide substantial weight savings in for example aircraft design With an increased use of composite materials follows an increased demand for cost efficient manufacturing methods Composite products are in many cases manufactured either by manual operations or by the use of complex automated solutions associated with high investment costs The objective for this research is to explore an approach to develop automated composite manufacturing based on commercially available off the shelf solutions as an alternative to the existing automated solutions for composite manufacturing The research which was carried out in collaboration with industrial partners within the aerospace sector is based on a demonstrator centered research approach Three conceptual demonstrators focusing on three different manufacturing methods and a number of physical demonstrators are used to show that off the shelf solutions can be used for automated manufacturing of composite products Two aspects that affect if it is possible to use off the shelf solutions for automated composite manufacturing are the rigorous quality standards used by the aerospace industry and the great variety in product properties and material properties that is associated with composite manufacturing The advantages in using off the shelf solutions has shown to be that the solutions generally are associated with low investments and that published information about the solutions and the solutions themselves is generally available for evaluation and testing When working with the demonstrators it has been shown to be useful to break down a manufacturing system into basic tasks and consider off the shelf solutions for each particular task This approach facilitates the search for a suitable off the shelf solution to solve a particular task However each of the separate tasks can affect other areas of the manufacturing system and an overall systems perspective is required to find solutions that are compatible with the entire manufacturing system Medical Field Manual United States. Surgeon-General's Office,1946 Designing Exoskeletons Luis Adrian Zuñiga-Aviles,Giorgio Mackenzie Cruz-Martinez,2024-03-27 Designing Exoskeletons focuses on developing exoskeletons following the lifecycle of an exoskeleton from design to manufacture It demonstrates how modern technologies can be used at every stage of the process such as design methodologies CAD CAE CAM software rapid prototyping test benches materials heat and surface treatments and manufacturing processes Several case studies are presented to provide detailed considerations on developing specific topics Exoskeletons are designed to provide work power rehabilitation and assistive training to sports and military applications Beginning with a review of the history of exoskeletons from ancient to modern times the book builds on this by mapping out recent innovations and state of the art technologies that

utilize advanced exoskeleton design Presenting a comprehensive guide to computer design tools used by bioengineers the book demonstrates the capabilities of modern software at all stages of the process looking at computer aided design manufacturing and engineering It also details the materials used to create exoskeletons notably steels engineering polymers composites and emerging materials Manufacturing processes both conventional and unconventional are discussed for example casting powder metallurgy additive manufacturing and heat and surface treatments This book is essential reading for those in the field of exoskeletons such as designers workers in research and development engineering and design students and those interested in robotics applied to medical devices Automation, Production Systems, and Computer-aided Manufacturing Mikell P.
