Vorsanova,2022-11-14 **DNA in Supramolecular Chemistry and Nanotechnology** Eugen Stulz,Guido H.

Clever,2015-09-28 This book covers the emerging topic of DNA nanotechnology and DNA supramolecular chemistry in its broader sense By taking DNA out of its biological role this biomolecule has become a very versatile building block in materials chemistry supramolecular chemistry and bio nanotechnology Many novel structures have been realized in the past decade which are now being used to create molecular machines drug delivery systems diagnosis platforms or potential electronic devices The book combines many aspects of DNA nanotechnology including formation of functional structures based on covalent and non covalent systems DNA origami DNA based switches DNA machines and alternative structures and templates This broad coverage is very appealing since it combines both the synthesis of modified DNA as well as designer concepts to successfully plan and make DNA nanostructures Contributing authors have provided first a general introduction for the non specialist reader followed by a more in depth analysis and presentation of their topic In this way the book is attractive and useful for both the non specialist who would like to have an overview of the topic as well as the specialist reader who requires more information and inspiration to foster their own research Comprehensive Supramolecular Chemistry II

George W. Gokel,Len Barbour,2017-06-22 Comprehensive Supramolecular Chemistry II Second Edition Nine Volume Set is a one stop shop that covers supramolecular chemistry a field that originated from the work of researchers in organic inorganic and physical chemistry with some biological influence The original edition was structured to reflect in part the origin of the field However in the past two decades the field has changed a great deal as reflected in this new work that covers the general principles of supramolecular chemistry and molecular recognition experimental and computational methods in supramolecular chemistry supramolecular receptors dynamic supramolecular chemistry supramolecular engineering crystallographic engineered assemblies sensors imaging agents devices and the latest in nanotechnology Each section begins with an introduction by an expert in the field who offers an initial perspective on the development of the field Each article begins with outlining basic concepts before moving on to more advanced material Contains content that begins with the basics before moving on to more complex concepts making it suitable for advanced undergraduates as well as academic researchers Focuses on application of the theory in practice with particular focus on areas that have gained increasing importance in the 21st century including nanomedicine nanotechnology and medicinal chemistry Fully rewritten to make a completely up to date reference work that covers all the major advances that have taken place since the First Edition published in 1996 **Redox-based Catalytic Chemistry of Transition Metal Complexes** Takahiko

Kojima,2024-12-20 Transition metal complexes as catalysts play an indispensable role in transformation of chemical substances to value added products using less energy consuming processes and with high selectivity and efficiency In collaboration with the Japan Society of Coordination Chemistry JSCC the work is a translation of the original Japanese book focusing on metal complex catalysts that are effective in redox reactions and covers important reactions involving metal

complex catalysts It describes not only what reactions proceed but also the intermediates they pass through and how the reactions proceed including computational chemistry approaches It allows you to gain a deeper understanding of the reaction mechanisms of metal complex catalysts The scope of this book includes oxidative reactions performed by high valent metal oxo species reductive reactions bond activation and bond formation and photocatalytic reactions Topics in this book will be interest to those studying catalytic chemistry and related fields including coordination chemistry organometallic chemistry organic chemistry bioinorganic chemistry and industrial chemistry

The Biology of Caves and Other Subterranean Habitats David C. Culver,Tanja Pipan,2019-04-01 The second edition of this widely cited textbook continues to provide a concise but comprehensive introduction to cave and subterranean biology describing this fascinating habitat and its biodiversity It covers a range of biological processes including ecosystem function evolution and adaptation community ecology biogeography and conservation The authors draw on a global range of examples and case studies from both caves and non cave subterranean habitats One of the barriers to the study of subterranean biology has been the extraordinarily large number of specialized terms used by researchers the authors explain these terms clearly and minimize the number that they use This new edition retains the same 10 chapter structure of the original but the content has been thoroughly revised and updated throughout to reflect the huge increase in publications concerning subterranean biology over the last decade
