

LOUIS BRAILLE

January 4, 1809 – January 6, 1852

Louis Braille invented the raised dot system of reading and writing for the blind and visually impaired. This tactile method permits the specially trained user to pass their fingers over embossed dots and "decode" the corresponding letters or symbols. Blind people around the world still use the braille system today. The braille method has been adapted to most languages as well as math, music and even computer programming.

Louis Braille was born the son of a harness and saddle maker in France in 1809. At the age of three, he was playing in his father's workshop and accidentally stabbed himself in the left eye with an awl. Subsequent infection and complications resulted in his losing vision in both eyes by the time he was four.

Unfortunately, few services existed for blind people at the time. Blind people were often treated as though their disability were mental rather than physical. Many blind people were forced to beg or depend on charity in order to survive.

Louis' parents and the local priest recognized that Louis was a bright child and set about trying to obtain an education for him. At first Louis attended the local school and simply tried to absorb the material from hearing what went on in class.

At age ten, Louis won a scholarship to one of the first blind specialty schools in the world, the *Institution Royale des Jeunes Aveugles* (Royal Institution for Blind Youth) in Paris.
