Solved Problems

1. Evaluate the following expressions without using MATLAB. Check the answers with MATLAB.

$$(a) \quad 6 \times 4 > 32 - 3$$

$$(b) \quad x = 4 \times 3 - 7 < 15 / 3 > -$$

$$(c) \quad y = 2 \times (3 < 8 / 4 + 2)^2 < (-2)$$

$$(d) \quad (5 + -0) / 3 == 3 - - (10 / 5 - 2)$$

Solution

```
>> % Part (a)
>> 6*4>32-3
ans =
    0
>> % Part (b)
>> y=4*3-7<15/3>-1
y =
     1
>> % Part (c)
>> y=2*(3<8/4+2)^2<(-2)
y =
     0
>> % Part (d)
>> (5+-0)/3==3--(10/5-2)
ans =
     1
>>

Discrete-time Signal Processing Darrell Williamson, 2012-12-06 The topics of control engineering and signal processing continue to flourish and develop In common with general scientific investigation new ideas concepts and interpretations emerge quite spontaneously and these are then discussed used discarded or subsumed into the prevailing subject paradigm Sometimes these innovative concepts coalesce into a new sub discipline within the broad subject tapestry of control and signal processing This preliminary battle between old and new usually takes place at conferences through the internet and in the journals of the discipline After a little more maturity has been acquired by the new concepts then archival publication as a scientific or engineering monograph may occur The applications of signal processing techniques have grown and grown They now cover the wide range from the statistical properties of signals and data through to the hardware problems of communications in all its diverse aspects Supporting this range of applications is a body of theory analysis and techniques which is equally broad Darrell Williamson has faced the difficult task of organising this material by adopting an algebraic approach This uses general mathematical and systems ideas and results to form a firm foundation for the discrete signal processing paradigm Although this may require some extra concentration and involvement by the student or researcher the rewards are a clarity of presentation and deeper insight into the power of individual results An additional benefit is that the algebraic language used is the natural language of computing tools like MATLAB and its simulation facility SIMULINK

System Dynamics Karl A. Seeler, 2014-08-26 This unique textbook takes the student from the initial steps in modeling a dynamic system through development of the mathematical models needed for feedback control The generously illustrated student friendly text focuses on fundamental theoretical development rather than the application of commercial software Practical details of machine design are included to motivate the non mathematically inclined student

Seismic Inversion Gerard T. Schuster, 2017-07-01 This book describes the theory and practice of inverting seismic data for the subsurface rock properties of the earth The primary application is for inverting reflection and or transmission data from engineering or exploration surveys but the methods described also can be used for earthquake studies Seismic Inversion will be of benefit to scientists and advanced students in engineering earth sciences and physics It is desirable that the reader has some familiarity with certain aspects of numerical computation such as finite difference solutions to partial differential equations numerical linear algebra and the basic physics of wave propagation For those not familiar with the terminology and methods of seismic exploration a brief introduction is provided To truly understand the nuances of seismic inversion we have to actively practice what we preach or teach Therefore computational labs are provided for most of the chapters and some field data labs are given as well

Fractional

Order Signal Processing Saptarshi Das, Indranil Pan, 2011-09-15 The book tries to briefly introduce the diverse literatures in the field of fractional order signal processing which is becoming an emerging topic among an interdisciplinary community of researchers This book is aimed at postgraduate and beginning level research scholars who would like to work in the field of Fractional Order Signal processing FOSP The readers should have preliminary knowledge about basic signal processing techniques Prerequisite knowledge of fractional calculus is not essential and is expounded at relevant places in connection to the appropriate signal processing topics Basic signal processing techniques like filtering estimation system identification etc in the light of fractional order calculus are presented along with relevant application areas The readers can easily extend these concepts to varied disciplines like image or speech processing pattern recognition time series forecasting financial data analysis and modeling traffic modeling in communication channels optics biomedical signal processing electrochemical applications and many more Adequate references are provided in each category so that the researchers can delve deeper into each area and broaden their horizon of understanding Available MATLAB tools to simulate FOSP theories are also introduced so that the readers can apply the theoretical concepts right away and gain practical insight in the specific domain
