**Industrial Policies and the Global Business Revolution** Ling Liu, 2005-07-05 As China has blended market reforms with comprehensive industrial policies most research has focused on the national government's strategies for economic growth. However, one of the unique characteristics of industrial policy in China is that it involves government intervention at all levels from the political elite all the way down to village leaders. This book focuses on the domestic appliance industry and China's three major business groups in this area: Haier, Hisense, and Aucma. The Haier Group in particular is one of the most successful and competitive enterprises in China and is very well placed to compete globally as the Chinese economy becomes more integrated with the world trading system. This volume shows how industrial policy is formulated at the national level and implemented at the local level and examines how local government frequently intervenes in local enterprises' business strategy and management. Of practical importance, this book provides academics, business people, and policy makers with valuable insights into the development process and a concrete understanding of the challenges faced in the global business revolution by one of the world's most dynamic economies.

**Technical Indicators and Safety Design of Freeway in High Altitude Area** Jianbei Liu, 2023-06-23 Qinghai Tibet Plateau has many special characteristics such as low pressure and hypoxia, complex geological conditions, fragile ecological environment, and various bad weather conditions which exerts a negative effect on highway construction and traffic safety. It is a huge challenge to build a safe and environment-friendly highway on the Tibetan Plateau due to lacking of mature experience around the world. Therefore, this book was supported by the National Science and Technology Support Program to research the critical indicators and technologies. This book focuses on the driving behavior and typical vehicle characteristics in the high altitude area to put forward a series of geometrical indicators and traffic safety improvement measures based on a great number of ground tests. Moreover, the relative achievements were applied to the demonstration project and validate the feasibility of indicators and countermeasures. It is of practical and leading significance for highway construction and improving the traffic level in the Qinghai Tibet Plateau.
