Building a Website: Designing a Website Page with CSS

1. Designing a Website Page with CSS

The first design decision you need to make is whether to use a template or a custom design. A template is a pre-designed page layout that you can modify to fit your needs. A custom design is a page layout that you create from scratch.

This document is a template. It is designed to be used as a starting point for your website. It contains a header, a main content area, and a footer. The header contains the site name and navigation links. The main content area contains the site content. The footer contains the site address and contact information. You can modify the template to fit your needs by changing the content and the layout.
