The chapter on session state looks at the limitations of cookieless session identifiers methods for heading off session denial of service attacks and how session state is affected by trust level. After the chapter explaining the provider model architecture in ASP.NET 2.0 and how it is useful for writing custom security providers you go to the MembershipProvider class and configuring the two default providers in the Membership feature: SqlMembershipProvider and ActiveDirectoryMembershipProvider. You'll see how to use RoleManager to make it easy to associate users with roles and perform checks declaratively and in code and wrap up working with three providers for RoleProvider: WindowsTokenRoleProvider, SqlRoleProvider and AuthorizationStoreRoleProvider to work with Authorization Manager or AzMan.
