

Human Blood Cell Typing

©Harvard Medical School 2009

Our organisms manufacture antibodies automatically to many molecules, proteins, and microorganisms. Among others, when foreign red-cell surface glycoproteins (antigens) are in the bloodstream they stimulate the immune system to manufacture antibodies. These antibodies (antibodies) are produced by specialized T-lymphocytes and plasma cells. These antibodies are important for killing microorganisms that enter the bloodstream. This antibody must react with antigens that also circulate in the bloodstream.
