

• **LEARNING GOAL 1:** Explain the evaluation and requirements process for a new program.

• **LEARNING GOAL 2:** Explain the importance of stakeholder involvement in the evaluation and requirements process.

Often people define program evaluation, either consciously or subconsciously, as a quality check—like a review or a judgment—on their job or program that shows what works. A better program will be defined as a program that shows a positive outcome. This definition implies that the program is a product, and a manager has the authority to make the program better or worse. In reality, however, program evaluation is not a quality check. It is a process that helps managers understand the strengths and weaknesses of a program and make decisions about how to improve it. This process is not a judgment on the program's quality, but a process that helps managers understand the program's value and make decisions about how to improve it. This process is not a quality check, but a process that helps managers understand the program's value and make decisions about how to improve it.

Look at the video below showing an organization's evaluation of its space program.

Reflection: What are the key questions that you should ask when you evaluate a program? How do you know if a program is a product or a process? How do you know if a program is a product or a process? How do you know if a program is a product or a process?
