Chapter 1

Trade in a Model with no Frictions

Exercise 1.1 (a) Equation 1.1 (Total amount of the consumption good in) $_t = N_t y_1 + N_{t-1} y_2$

- Equation 1.2 (Total consumption by the young) $_t = N_t c_{1t}$
- Equation 1.3 (Total consumption by the old) $_t = N_{t-1} c_{2t}$
- Equation 1.4 Feasibility constraint:

$$N_t c_{1t} + N_{t-1} c_{2t} \leq N_t y_1 + N_{t-1} y_2$$

With a constant population, we have,

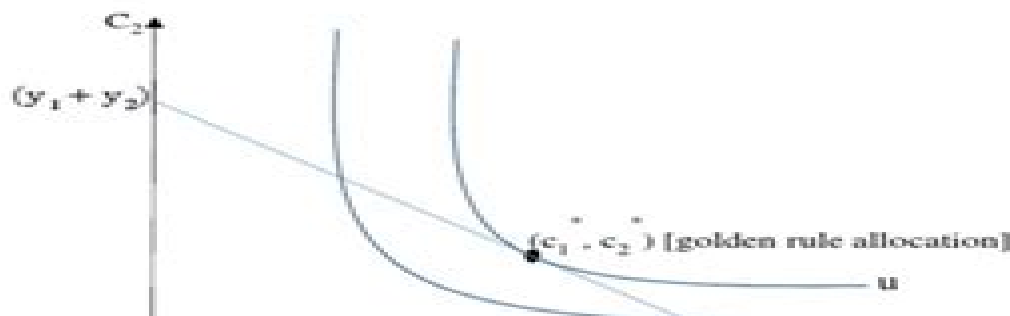

$$N c_{1t} + N c_{2t} \leq N y_1 + N y_2$$

Dividing throughout by N , we have

- Equation 1.5 $c_{1t} + c_{2t} \leq y_1 + y_2$
- Equation 1.6 Assuming a stationary allocation, the per capita constraint becomes

$$c_1 + c_2 \leq y_1 + y_2$$

(b) $(c_1, c_2) \rightarrow$ Golden Rule Allocation: allocation that maximizes the utility of future generations.

Modeling Monetary Economies Solutions:

Modeling Monetary Economies Bruce Champ, Scott Freeman, 2001-01-15 This upper level undergraduate textbook now in its second edition approaches monetary economics using the classical paradigm of rational agents in a market setting Too often monetary economics has been taught as a collection of facts about existing institutions for students to memorize By teaching from first principles the authors aim to instruct students not only in existing monetary policies and institutions but also in what policies and institutions may or should exist in the future The text builds on a simple clear monetary model and applies this framework consistently to a wide variety of monetary questions The authors have added in this second edition new material on speculative attacks on currencies social security currency boards central banking alternatives the payments system and the Lucas model of price surprises Discussions of many topics have been extended presentations of data greatly expanded and new exercises added

Ownership of Capital in Monetary Economies and the Inflation Tax on Equity Mr. Ralph Chami, Mr. Thomas F. Cosimano, Connel Fullenkamp, 1999-12-01 Financial instruments are subject to inflation taxes on the wealth they represent and on the nominal income flows they provide This paper explicitly introduces financial instruments into the standard stochastic growth model with money and production and shows that the value of the firm in this case is equal to the firm's capital stock divided by inflation The resulting asset pricing conditions indicate that the effect of inflation on asset returns differs from the effects found in other papers by the addition of a significant wealth tax

Economic Growth Alfonso Novales, Esther Fernández, Jesús Ruiz, 2021-12-03 This is the third corrected and extended edition of a book on deterministic and stochastic Growth Theory and the computational methods needed to produce numerical solutions Exogenous and endogenous growth non monetary and monetary models are thoroughly reviewed Special attention is paid to the use of these models for fiscal and monetary policy analysis Models under modern theories of the Business Cycle New Keynesian Macroeconomics and Dynamic Stochastic General Equilibrium models can be all considered as special cases of economic growth models and they can be analyzed by the theoretical and numerical procedures provided in the textbook Analytical discussions are presented in full detail The book is self contained and it is designed so that the student advances in the theoretical and the computational issues in parallel Spreadsheets are used to solve simple examples Matlab files are provided on an accompanying website to illustrate theoretical results from all

chapters as well as to simulate the effects of economic policy interventions The logical structure of these program files is described in Numerical exercise type of sections where the output of these programs is also interpreted The third edition corrects a few typographical errors includes two new and original chapters on frequentist and Bayesian estimation and improves some notation

Dynamic General Equilibrium Modeling Burkhard Heer,Alfred Maussner,2011-10-20 Modern business cycle theory and growth theory uses stochastic dynamic general equilibrium models In order to solve these models economists need to use many mathematical tools This book presents various methods in order to compute the dynamics of general equilibrium models In part I the representative agent stochastic growth model is solved with the help of value function iteration linear and linear quadratic approximation methods parameterised expectations and projection methods In order to apply these methods fundamentals from numerical analysis are reviewed in detail In particular the book discusses issues that are often neglected in existing work on computational methods e g how to find a good initial value In part II the authors discuss methods in order to solve heterogeneous agent economies In such economies the distribution of the individual state variables is endogenous This part of the book also serves as an introduction to the modern theory of distribution economics Applications include the dynamics of the income distribution over the business cycle or the overlapping generations model In an accompanying home page to this book computer codes to all applications can be downloaded

Ownership of Capital in Monetary Economies and the Inflation Tax on Equity Ralph Chami, Thomas F.

Cosimano, Connel Fullenkamp, 1999 Frontiers of Business Cycle Research Thomas F. Cooley, 2020-09-01 Among the most revolutionary and productive areas of economic research over the last two decades modern business cycle theory is finally made accessible to students and professionals in this rigorous unified introductory volume This theory starts with the view that growth and fluctuations are not distinct phenomena to be studied separately and that business cycles result from shocks such as the availability of new technologies which regularly affect most economies The unifying theme of this book is the use of the neoclassical growth framework to study the economic fluctuations associated with the business cycle Presenting recent advances in dynamic economic theory and computational methods with emphasis on the construction of equilibrium paths for simple artificial economies leading experts orient readers in the quantitative study of aggregate fluctuations and apply its concepts to key issues in macroeconomics and business cycle theory This volume covers such issues as the aggregate labor market the role of the household sector the role of money the behavior of asset markets non Walrasian economies monopolistically competitive economies international business cycles and the design of economic policies The contributors are David Backus V V Chari Lawrence Christiano Thomas F Cooley Jean Pierre Danthine John Donaldson Jeremy Greenwood Gary D Hansen Patrick Kehoe Finn Kydland Edward C Prescott Richard Rogerson Julio Rotemberg Geert Rouwenhorst Jos Vctor Ros Rull Michael Woodford and Randall Wright *Journal of International Economics*, 1994 **Modelling and Control of National and Regional Economies 1995** Ljubisa Vlačić, Duc-Tho Nguyen, Dubravka Čećez-Kecmanović, 1996 Paperback The IFAC Symposium on Modelling and Control of National and Regional Economies held on 2-5 July 1995 at the

Spear, Warren Young, 2023-09-04 The 800 pound gorilla in the room of macroeconomics is the question of why the overlapping generations model didn't become the central workhorse model for macroeconomics as opposed to the neoclassical growth model The authors here explore the co evolution of the two models **Directory of Published Proceedings**, 2004 **A Modern Guide to Post-Keynesian Institutional Economics** Whalen, Charles J., 2022-04-19 This Modern Guide advances Post Keynesian Institutional economics an integrative tradition inspired by keen economic observers such as John Kenneth Galbraith Joan Robinson and Hyman Minsky that bridges Institutional and Post Keynesian economics The tradition proved its worth by addressing the global financial crisis of 2007 2009 as well as by analyzing long term trends accompanying the evolution of investor driven money manager capitalism including financialization spreading worker insecurity and rising inequality The book begins with the history and contours of Post Keynesian Institutionalism and then breaks new ground extending recent analyses of contemporary economic problems sharpening concepts and methods sketching new theories and synthesizing ideas across research traditions **Robustness** Lars Peter Hansen, Thomas J. Sargent, 2011-11-28 The standard theory of decision making under uncertainty advises the decision maker to form a statistical model linking outcomes to decisions and then to choose the optimal distribution of outcomes This assumes that the decision maker trusts the model completely But what should a decision maker do if the model cannot be trusted Lars Hansen and Thomas Sargent two leading macroeconomists push the field forward as they set about answering this question They adapt robust control techniques and apply them to economics By using this theory to let decision makers acknowledge misspecification in economic modeling the authors develop applications to a variety of problems in dynamic macroeconomics Technical rigorous and self contained this book will be useful for macroeconomists who seek to improve the robustness of decision making processes **Advances in Systems, Computing Sciences and Software Engineering** Tarek Sobh, Khaled Elleithy, 2007-09-27 Advances in Systems Computing Sciences and Software Engineering This book includes the proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 05 The proceedings are a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of computer science software engineering computer engineering systems sciences and engineering information technology parallel and distributed computing and web based programming SCSS 05 was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering
