

CHAPTER 4

4.1 Chemical Reactions

Chemical Change

- the transformation of one or more substances into different substances with different properties

Chemical Reactions

- include a change in energy → energy is absorbed or released (heat, light, sound)
- occur at different rates: some are fast others are slow (a catalyst can be used to speed up reactions)

Clues to a chemical change

- Change in colour
- Energy is released or absorbed
- Gas is produced
- A precipitate (solid) forms from two liquids
- Difficult to reverse

NOTE: a change in state or dissolving a substance is NOT a chemical change

Chemical Equations

- Represent chemical reactions by using words or symbols and formulas
- Starting materials are called "reactants"
- New substances are called "products"
- An arrow (→) is read as "produces"
- States of matter appear in brackets after a chemical formula
- (s)=solid (l)=liquid (g)=gas (aq) dissolved in water

Word Equations

Ex. 1

- $\text{Mg (s)} + \text{HCl (aq)} \rightarrow \text{MgCl}_2 \text{ (aq)} + \text{H}_2 \text{ (g)}$
- Magnesium metal "reacts with" hydrochloric acid "to produce" Magnesium chloride and hydrogen gas

Ex. 2

- $\text{FeSO}_4 \text{ (aq)} + \text{NaCl} \rightarrow \text{FeCl}_2 \text{ (s)} + \text{Na}_2\text{SO}_4 \text{ (aq)}$
- Iron (II) sulfate reacts with sodium chloride to produce iron (II) chloride and sodium sulfate

Modeling Chemistry Unit 10 Ws 2:

Announcement of Teachers College, Columbia University Columbia University. Teachers College, 1933

Comprehensive Inorganic Chemistry II, 2013-07-23 Comprehensive Inorganic Chemistry II Nine Volume Set reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas, Comprehensive Inorganic Chemistry II includes biological inorganic chemistry, solid state chemistry, materials chemistry, and nanoscience. The work is designed to follow on with a different viewpoint and format from our 1973 work, Comprehensive Inorganic Chemistry, edited by Bailar, Emel'us, Nyholm, and Trotman-Dickenson, which has received over 2 000 citations. The new work will also complement other recent Elsevier works in this area: Comprehensive Coordination Chemistry and Comprehensive Organometallic Chemistry, to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable long standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds, or applications. Chapters are written by teams of leading experts under the guidance of the Volume Editors and the Editors in Chief. The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements, which is available from many sources and the original work, but instead concentrate on applications of the elements and their compounds. Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields such as biological inorganic chemistry, materials chemistry, solid state chemistry, and nanoscience. Inorganic chemistry is rapidly developing, which brings about the need for a reference resource such as this that summarises recent developments and simultaneously provide background information. Forms the new definitive source for researchers interested in elements and their applications, completely replacing the highly cited first edition which published in 1973. *Biological Chemistry* Thomas Michael Foley, 1991. *Scientific and Technical Aerospace Reports*, 1995. Popular Photography, 1995-11. Macromolecular Chemistry-11 H. Eisenberg, 2013-10-22. Macromolecular Chemistry 11 is a collection of lectures presented at the International Symposium on Macromolecules. The Third Aharon Katzir Katchalsky Conference held in Jerusalem, Israel, on July 13-18, 1975. The papers explore a wide range of topics related to macromolecular chemistry, including polyelectrolytes, biologically active synthetic polymers, and spans of polymer chains. The use of polymers as chemical reagents is also considered. This book is comprised of 19 chapters and begins with an introduction to the close relation between polyelectrolytes and hydrophilic colloids. A survey of polyelectrolyte knowledge that has accumulated since about 1940 is also presented. The discussion then turns to biologically active synthetic polymers, polymers, and other composites. Theories of the condensed polymer state, polymer adsorption inferred from electrical double layer measurements, and mobility and conductivity of ions in and into polymeric solids. The structure and viscoelastic

properties of ion containing polymers in the solid state are also examined along with the use of graphite insertion compounds as chemical reagents in organic chemistry The results of research on chemical modification of cellulose are also presented This monograph will be of interest to chemists **Computational Nanoscience** Elena Bichoutskaia,2011-06-09

Nanoscience is one of the most exciting areas of modern physical science as it encompasses a range of techniques rather than a single discipline It stretches across the whole spectrum of science including medicine and health physics engineering and chemistry Providing a deep understanding of the behaviour of matter at the scale of individual atoms and molecules it provides a crucial step towards future applications of nanotechnology The remarkable improvements in both theoretical methods and computational techniques make it possible for modern computational nanoscience to achieve a new level of chemical accuracy It is now a discipline capable of leading and guiding experimental efforts rather than just following others Computational Nanoscience addresses modern challenges in computational science within the context of the rapidly evolving field of nanotechnology It satisfies the need for a comprehensive yet concise and up to date survey of new developments and applications presented by the world s leading academics It documents major recent advances in scientific computation mathematical models and theory development that specifically target the applications in nanotechnology Suitable for theoreticians researchers and students the book shows readers what computational nanoscience can achieve and how it may be applied in their own work The twelve chapters cover topics including the concepts behind recent breakthroughs the development of cutting edge simulation tools and the variety of new applications **Selected Water Resources Abstracts**
