

Chemistry – Unit 7 Review

Chemical Reaction Model

1. Describe key characteristics of all chemical reactions, including the role of energy. Explain how a balanced equation represents these features (include an example).

In chemical reactions, atoms of the reactants recombine to form new substances in the products. There is almost always some transfer between the thermal and chemical energy accounts as well as an exchange of thermal energy via heating (Q) between the system and surroundings. The balanced chemical equation represents this process symbolically, showing that the atoms in the products are the same as those in the reactants

Note: there are 4 atoms of H and 2 atoms of O on each side of the equation.

Applying the Model

2. Balance the reaction below by drawing any additional reactant and/or product molecules that would be needed.

Write the **balanced equation** for this reaction.

Which of these molecules would be called reactants?

DB₂, CD₂, and BAC are reactants

Modeling Chemistry U7 Test

JE Gale

Modeling Chemistry U7 Test:

As recognized, adventure as without difficulty as experience practically lesson, amusement, as with ease as concord can be gotten by just checking out a book **Modeling Chemistry U7 Test** as well as it is not directly done, you could give a positive response even more in this area this life, on the subject of the world.

We provide you this proper as without difficulty as easy habit to get those all. We give Modeling Chemistry U7 Test and numerous ebook collections from fictions to scientific research in any way. in the midst of them is this Modeling Chemistry U7 Test that can be your partner.
