was held under the auspices of IUFRO WPS 2.01.13 Root Physiology and Symbiosis and its aim was to bring together scientific researchers, foresters and arboriculturalists to discuss current problems in structural root research and disseminate knowledge to an audience from a wide disciplinary background. For the first time in an international conference, emphasis was placed on presenting recent research in the field of tree anchorage mechanics and root biomechanics. The way in which tree stability can be affected by root system symmetry and architecture was addressed as well as how movement during wind sway can influence the development and shape of woody roots. The role of different nursery and planting techniques was discussed in relation to effects on root system form and development. Root response to different environmental stresses including water temperature, nutrient and mechanical stress was addressed in detail. The structure and function of woody roots was also considered at different levels from coarse to fine roots, with several papers discussing the interaction between roots and the rhizosphere. One of the conference highlights was the presentation of new methods in root research by a series of workshops held at LRBB INRA Pierroton on the northern border of the Gascony forest.
