

## STUDYING PEDIGREES ACTIVELY

**Genealogical** is gathering or creating a tree that depicts a family history or the transmission of a specific trait. They have been increasingly in vogue and have become important tools in identifying patterns of inheritance of specific traits. Pedigrees can depict inheritance for specific characteristics without involving a complex debate on how phenotypes reflect genotypes or a potentially identified mutation in one or both alleles. They are also useful when looking at Mendelian traits (pedigreechartresources.com) and a few examples follow for example, inherited flower colour.

### The Components of a Pedigree:

Unshaded symbols reflect that

an allele associated with the trait is not

present (individual is "affected" by the trait when present in the shape)

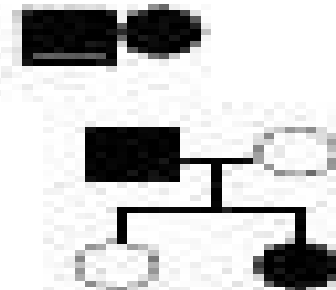

After determine whether the characteristic is dominant or recessive

After determine how the characteristic is inherited

Remember, you will determine shape effectively before the actual inheritance is known (determined) or known or known

Good pages for pedigree charts for a few examples for more examples
