$$\text{Power} = \text{Current}^2 \times \text{Resistance}$$

$$P = I^2 \times R$$

1. Jarmin builds a circuit with a bulb, an ammeter and a 6V battery. The ammeter reads 2A, what is the power supplied to the bulb?

$$6 \times 2 = 12\text{W}$$

2. A resistor of 8Ω has a current flowing through it of 3A, what is the power supplied to the resistor?

$$3^2 \times 8 = 9 \times 8 = 72\text{W}$$

3. An LED has a measured power output of 12W. If the voltage of the attached battery is 3V, what is the current flowing through the LED?

$$12 \div 3 = 4\text{A}$$

4. An electric hob has a power output of 2000W and a current flowing through it of 10A.

are mistaking people for puppets and these transparently cynical efforts are doomed to fail This book goes beyond the hype and focuses on the 20% that are getting it right We have spoken to hundreds of leaders in organizations around the world about their gamification strategies and we have seen some spectacular successes The book examines some of these successes and identifies the common characteristics of these initiatives to define the solution space for success It is a guide written for leaders of gamification initiatives to help them avoid the pitfalls and employ the best practices to ensure they join the 20% that gets it right Gamify shows gamification in action as a powerful approach to engaging and motivating people to achieving their goals while at the same time achieving organizational objectives It can be used to motivate people to change behaviors develop skills and drive innovation The sweet spot for gamification objectives is the space where the business objectives and player objectives are aligned Like two sides of the same coin player and business goals may outwardly appear different but they are often the same thing expressed different ways The key to gamification success is to engage people on an emotional level and motivating them to achieve their goals
