Economists' Mathematical Manual Peter Berck, Knut Sydsaeter, 2013-03-09 The practice of economics requires a wide ranging knowledge of formulas from mathematics and mathematical economics The selection of results from mathematics included in handbooks for chemistry and physics ill suits economists There is no concise reporting of results in economics With this volume we hope to present a formulary targeted to the needs of students

as well as the working economist It grew out of a collection of mathematical formulas for economists originally made by Professor B Thalberg and used for many years by Scandinavian students and economists The formulary has 32 chapters covering calculus and other often used mathematics programming and optimization theory economic theory of the consumer and the firm risk finance and growth theory non cooperative game theory and elementary statistical theory The book contains just the formulas and the minimum commentary needed to re learn the mathematics involved We have endeavored to state theorems at the level of generality economists might find useful By and large we state results for n dimensional Euclidean space even when the results are more generally true In contrast to the economic maxim everything is twice more continuously differentiable than it needs to be we have listed the regularity conditions for theorems to be true We hope that we have achieved a level of explication that is accurate and useful without being pedantic
