Binocular rivalry: a gateway to consciousness Alexander Maier, Theofanis Panagiotaropoulos, Naotsugu Tsuchiya, Georgios A. Keliris, Brain mind problems like consciousness have been stimulating the interest of philosophers and scientists since the ancient times In the last decades the dramatic development of neuroscience has allowed studying such phenomena at several different levels from single neurons to behavior Binocular rivalry a paradigm dissociating the sensory input from the conscious perception during dichoptic viewing of incongruent images has been a celebrated example of such a tool During the last century empirical research on binocular rivalry contributed the first important insights into the neuronal mechanisms of subjective visual perception Recent advances in brain imaging and electrophysiological recording stimulating techniques as well as novel theoretical concepts and analytical methods could be exploited to expand our knowledge on this fascinating phenomenon of visual perception and elucidate the neural processes underlying visual consciousness This Research Topic aims to bring together contributions that could expand the current frontiers of knowledge in binocular rivalry In particular we would like to focus on reviews hypothesis theory or original research articles that specifically combine novel concepts analytical tools and neurophysiological techniques with binocular rivalry We expect that these contributions will a integrate the vast knowledge already existing in the field b formulate and when possible address questions under the light of recent methodological advances in neuroscience and c provide a benchmark that will stimulate future cutting edge research

A Methodology for Estimating the Effect of Aircraft Carrier Operational Cycles on the Maintenance Industrial Base Roland J.

Yardley,2007 Over the next two decades the United States Navy will at any one time have a fleet of ten to 12 aircraft carriers Of these two or three will be continuously deployed and on station at any one time in its major overseas operational areas of the Mediterranean the Indian Ocean and Persian Gulf region and the Western Pacific in support of combatant commanders In addition the Navy intends to surge carriers including those already deployed so that a total of six carriers can be provided to combatant commanders within 30 days and another carrier within 90 days The ability of the Navy to meet all these requirements is constrained both by the six month limit on deployment length and by the intensive training and maintenance demands of aircraft carriers The Navy has considered the six month limit on deployments and the predictability of Carrier Strike Groups CSGs rotation key to maintaining forward presence while meeting personnel recruiting and retention goals In addition maintenance is constantly being performed on aircraft carriers with nearly a third of a carrier s lifetime being spent either preparing for or actually in depot level repair availabilities in which it is not deployable The Danube River Basin
