Tests and Proofs Bernhard Beckert, Reiner Hähnle, 2008-04-04 This volume contains the research papers invited papers and abstracts of tutorials presented at the Second International Conference on Tests and Proofs TAP 2008 held April 9-11 2008 in Prato Italy TAP was the second conference devoted to the convergence of proofs and tests It combines ideas from both areas for the advancement of software quality To prove the correctness of a program is to demonstrate through impeccable mathematical techniques that it has no bugs to test a program is to run it with the expectation of discovering bugs On the surface the two techniques seem contradictory if you have proved your program it is fruitless to comb it for bugs and if you are testing it that is surely a sign that you have given up on any hope of proving its correctness Accordingly proofs and tests have since the onset of software engineering research been pursued by distinct communities using rather different techniques and tools And yet the development of both approaches leads to the discovery of common issues and to the realization that each may need the other The emergence of model checking has been one of the first signs that contradiction may yield to complementarity but in the past few years an increasing number of research efforts have encountered the need for combining proofs and tests dropping earlier dogmatic views of their incompatibility and taking instead the best of what each of these software engineering domains has to offer

Research and Practice of Active Learning in Engineering Education Erik de Graaff, Gillian Saunders-Smiths, Michael Nieweg, 2005 Since 2001 the international network Active Learning in Engineering education ALE organized a series of international workshops on innovation of engineering education The papers in this book are selected to reflect the state of the art based on contributions to the 2005 ALE workshop in Holland This overview of experiences in research and practice aims to be a source of inspiration for engineering educators

Service Engineering Schahram Dustdar, Fei Li, 2010-10-22 Service engineering is increasingly posing challenges to traditional software engineering methodologies including specification modeling architecture and verification just to name a few On the other hand the latest advancements in software engineering are continuously leveraged in Service Engineering research especially in the design and implementation of service oriented systems Several mutual impacts between service engineering and software engineering could be observed in the last decade and many research efforts have been devoted to the field However in spite of the considerable efforts and significant

contributions few have attempted to summarize the research results systematically *Automated Deduction - CADE-21* Frank Pfenning, 2007-09-04 A veritable one stop shop for anyone looking to get up to speed on what is going down in the field of automated deduction right now This book contains the refereed proceedings of the 21st International Conference on Automated Deduction CADE 21 held in Bremen Germany in July 2007 The 28 revised full papers and 6 system descriptions presented were selected from 64 submissions All current aspects of automated deduction are addressed ranging from theoretical and methodological issues to presentation and evaluation of theorem provers and logical reasoning systems

Guide to Advanced Empirical Software Engineering Forrest Shull, Janice Singer, Dag I. K. Sjøberg, 2007-11-21 Empirical studies have become an important part of software engineering research and practice Ten years ago it was rare to see a conference or journal article about a software development tool or process that had empirical data to back up the claims Today in contrast it is becoming more and more common that software engineering conferences and journals are not only publishing but eliciting articles that describe a study or evaluation Moreover a very successful conference International Symposium on Empirical Software Engineering and Measurement journal Empirical Software Engineering and organization International Software Engineering Research Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering d bled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference
