**The Earth Observer**, 2009 Low-Carbon Economy and Sustainable Development: Driving Force, Synergistic Mechanism, and Implementation Path Zhen Liu, Wang Pei, Jing Lan, Jingchao Zhang, 2024-11-25 In recent years, with global economic development and population growth, environmental issues have become increasingly prominent. Climate change and energy crisis have become global problems that restrict human development and so need to be solved urgently. As a comprehensive economic development model, the low carbon economy can greatly reduce energy and resource consumption, mitigate and adapt to climate change, promote economic development, and thus achieve the goal of sustainable development. Therefore, exploring efficient paths toward sustainable development through carbon reduction is an urgent and challenging research topic currently. This Research Topic aims to conduct scientific research and exchange from the perspectives of clarifying the drivers behind carbon reduction, investigating the synergistic mechanism between the low carbon economy and sustainable development, and then exploring the pathways to low carbon development. Through comprehensive research and comparative analysis of the relationship between low carbon economy and sustainable development, we will verify the

feasibility of innovations and updates of carbon reduction applications for sustainable development provide scientific strategies in terms of low carbon economy for sustainable development design technical routes and propose corresponding policy recommendations Export Product Quality, Renewable Energy, and Sustainable Production Umer Shahzad, Gagan Deep Sharma, Lianbiao Cui, John Mendy, 2023-09-12 Economic development has long been acknowledged for its beneficial effects on human well being In the context of economic globalization and vertical specialization increasing the quality of export products is more critical and necessary to export success and sustainable development The product's quality is inextricably linked to its manufacture and production which need various types of energy and raw materials Meanwhile the adoption of more environmentally friendly and cleaner energy sources contributes to the achievement of sustainable production Therefore product quality may provide a new perspective from which to investigate the systematic relationship between greener and renewable energy sources sustainable production and environmental regulations as well as the nature of export competitiveness Generally export product quality has referred to the quality of manufactured products within the product lines Quality refers to the relative price of a country's varieties within their respective product lines Product sophistication assesses the composition of the aggregate exports Different varieties of same product as per quality level are being produced by several developing and emerging economies Within any given product line quality converges both conditionally and unconditionally to the world's benchmark increases in institutional quality and human capital are associated with faster quality upgrading In turn faster growth in quality is associated with more rapid output growth
