Bunker, Andy Hector, Michel Loreau, Charles Perrings, 2009-07-30 How will biodiversity loss affect ecosystem functioning ecosystem services and human well being In an age of accelerating biodiversity loss this timely and critical volume summarizes recent advances in biodiversity ecosystem functioning research and explores the economics of biodiversity and ecosystem services The book starts by summarizing the development of the basic science and provides a meta analysis that quantitatively tests several biodiversity and ecosystem functioning hypotheses It then describes the natural science foundations of biodiversity and ecosystem functioning research including quantifying functional diversity the development of the field into a predictive science the effects of stability and complexity methods to quantify mechanisms by which diversity affects functioning the importance of trophic structure microbial ecology and spatial dynamics Finally the book takes research on biodiversity and ecosystem functioning further than it has ever gone into the human dimension describing the most pressing environmental challenges that face humanity and the effects of diversity on climate change mitigation restoration of degraded habitats managed ecosystems pollination disease and biological invasions However what makes this volume truly unique are the chapters that consider the economic perspective These include a synthesis of the economics of ecosystem services and biodiversity and the options open to policy makers to address the failure of markets to account for the loss of ecosystem services an examination of the challenges of valuing ecosystem services and hence to understanding the human consequences of decisions that neglect these services and

an examination of the ways in which economists are currently incorporating biodiversity and ecosystem functioning research into decision models for the conservation and management of biodiversity A final section describes new advances in ecoinformatics that will help transform this field into a globally predictive science and summarizes the advancements and future directions of the field The ultimate conclusion is that biodiversity is an essential element of any strategy for sustainable development Linguistics ,1972 *Children's Books in Print* R R Bowker Publishing,Bowker,1999-12
