Includes key techniques for water resources management and sustainable development. **Comprehensive Water Quality and Purification**, 2013-09-24

Comprehensive Water Quality and Purification Four Volume Set provides a rich source of methods for analyzing water to assure its safety from natural and deliberate contaminants including those that are added because of carelessness of human endeavors. Human development has great impact on water quality and new contaminants are emerging every day. The issues of sampling for water analysis, regulatory considerations and forensics in water quality and purity investigations are covered in detail. Microbial as well as chemical contaminations from inorganic compounds, radionuclides, volatile and semivolatile compounds, disinfectants, herbicides and pharmaceuticals including endocrine disruptors are treated extensively. Researchers must be aware of all sources of contamination and know how to prescribe techniques for removing them from our water supply. Unlike other works published to date that concentrate on issues of water supply, water resource management, hydrology and water use by industry, this work is more tightly focused on the monitoring and improvement of the quality of existing water supplies and the recovery of wastewater via new and standard separation techniques. Using analytical chemistry methods offers remediation advice on pollutants and contaminants in addition to providing the critical identification perspective. The players in the global boom of water purification are numerous and varied. Having worked extensively in academia and industry, the Editor in Chief has been careful about constructing a work for a shared audience and cause. *Co-Engineering and Participatory Water Management* Katherine A. Daniell, 2012-05-31

Effective participatory water management requires effective co-engineering, the collective process whereby organisational decisions are made on how to bring stakeholders together. This transdisciplinary book highlights the challenges involved in the collective initiation, design, implementation and evaluation of water planning and management processes. It demonstrates how successful management requires the effective handling of two participatory processes: the stakeholder water management process and the co-engineering process required to organise this. The book provides practical methods for supporting improved participatory processes including the application of theory and models to aid decision making. International case studies of these applications from Australia, Europe and all over the world including Africa are used to examine negotiations and leadership approaches and their effects on the participatory stakeholder processes. This international review of participatory
