Wartofsky, 2013-06-29 In three volumes a distinguished group of scholars from a variety of disciplines in the natural and social sciences the humanities and the arts contribute essays in honor of Robert S Cohen on the occasion of his 70th birthday The range of the essays as well as their originality and their critical and historical depth pay tribute to the extraordinary scope of Professor Cohen's intellectual interests as a scientist philosopher and a humanist and also to his engagement in the world of social and political practice The essays presented in Physics Philosophy and the Scientific Community Volume I of Essays in Honor of Robert S Cohen focus on philosophical and historical issues in

contemporary physics on the origins and conceptual foundations of quantum mechanics on the reception and understanding of Bohr's and Einstein's work on the emergence of quantum electrodynamics and on some of the sharp philosophical and scientific issues that arise in current scientific practice e.g. in superconductivity research. In addition, several essays deal with critical issues within the philosophy of science, both historical and contemporary e.g. with Cartesian notions of mechanism in the philosophy of biology, with the language and logic of science e.g. with new insights concerning the issue of a physicalistic language in the arguments of Neurath, Carnap, and Wittgenstein, with the notion of elementary logic, and with rational and non-rational elements in the history of science. Two original contributions to the history of mathematics and some studies in the comparative sociology of science round off this outstanding collection.
