LUBRICATION

The four-cycle power head is lubricated by a pressurized oil system which uses a separate oil reservoir. Do not mix oil with the fuel. The oil pump should be drained and refilled with two quarts of a good grade automotive oil, SAE 30, type MS every 100 hours of operation, and oil level checked daily. If motor is operated at temperatures below 32°F., SAE 10, MS oil should be used. The lubricating system uses a cartridge type oil filter and the element should be renewed when oil is changed.

Refer to Fig. H1 for location of the engine oil reservoir drain (D) and oil level indicator (C) plugs. The engine oil filler cap on early motors is located under shroud on rear, port side of power head. On later motors, filler cap is just behind the ignition distributor. The oil filter cartridge is located on starboard side of block and can be renewed after removing shroud.

The lower unit gears and bearings are lubricated by oil contained in the gear case. The best available grade of SAE 30 outboard gear oil should be used. Gearcase capacity is 12 ounces. Drain the gear housing every 100 hours by removing the drain plug (P) and bleed plug (B). Refill

FUEL SYSTEM

The motor is equipped with two Tillotson model MD 1208 or C carburetors which may be identically adjusted and synchronized. Each carburetor supplies the fuel mixture for two of the four cylinders. An automotive, di-

CARBURETOR. Refer to Fig. H2 for an installed view of carburetors. Normal initial setting for the idle mixture needle (13) is 1 1/4 turns open from the closed position. Carburetor is equipped with a fixed high-speed jet. Idle mixture and speed adjustments should be checked under load after engine is at operating temperature, and both carburetors adjusted alike.
