

## Atomic Structure – Study Guide

### Grade 8 – Physical Science

**Atom** -- smallest particle of an element that has all the properties of that element.

**3 main subatomic particles:**

1. protons
2. neutrons
3. electrons

**nucleus** -- core of the atom, it is positively charged 99.9 % of the atoms mass is in the nucleus. Protons and neutrons are found in the **nucleus**.

**1. Protons** -- have a positive (+) charge. Found in the nucleus of the atom.

The **number of protons** determines what element an atom is.

**Example:** Carbon has 6 protons

**Atomic Number** = the **number of protons**, each element has it own unique number of protons.

**2. Neutrons** -- a neutral charge (no charge) found in the nucleus. These determine whether an element is radioactive.

Protons and neutrons are about *one atomic mass unit (amu)*. Electrons have a much smaller mass -- it takes almost 2000 electrons to equal 1 amu.

**Atomic Mass** = the total number of protons and neutrons.

**Mass Number** = Atomic Mass that is rounded.

To find just how many **neutrons** an atom has:

# neutrons = atomic mass – atomic #

**Isotopes** - atoms of the same element that have different number of neutrons.

**Carbon-12**

6 protons

6 neutrons

**Carbon-14**

6 protons

8 neutrons

**NOTICE** – the number of **protons DOES NOT** change if it is to be carbon -- only the number of neutrons.

**3. Electrons** - have a negative (-) charge. Found moving around the atom is a space called orbital's (shells).

Those electrons farthest away from the nucleus are called **valence electrons**, and are involved in the formation of chemical bonds.

**In an uncharged atom the number of protons is equal to the number of electrons.**

**ion** - when an atom gains or loses an *electron*. (has a charge)

If an atom gains electrons = negative (-) charge

If an atom loses electrons = positive (+) charge

**How to find:**

# protons = atomic #

# neutrons = atomic mass – atomic #

# electrons = atomic # – charge (if any)
