Current Advances in Applied Microbiology & Biotechnology, 1994 *Microbiological Reviews*, 1988 **Routes to Cellulosic Ethanol** Marcos Silveira Buckeridge, Gustavo H Goldman, 2011-01-07 The perception that civilization is crossing a period of Global Climatic Changes that can seriously threaten our lifestyle along with energy security and the search for prosperity are the main drivers that are pushing men to use more biomass as a source of energy It will be crucial that such intent will include a large parcel of sustainability so that more renewable energy becomes available for populations Because large amounts of energy are hidden in carbon polymers made by plants notably carbohydrates it is obvious that if technologies are developed to produce liquid fuels such as ethanol from carbohydrate polymers such as cellulose men could significantly increase energy sustainability This book reviews general aspects of biomass utilization for bioenergy production as well as strategies using biochemistry molecular biology chemistry and physics to disassemble plant cell walls Recent discoveries of basic science under development in several laboratories in the world are reviewed by experts that have been intensively working with many aspects that will impact the development of the technology of production of cellulosic ethanol

A Microbial Enzyme-Xylanase Pradeep G. C.,2013-09-15 [Screening, Characterization of Xylanase Producing Microorganisms](#) Dr. Suneetha Vuppu,2011-04 Xylanase is an enzyme of glycosyl hydrolase family 11 that can easily break the beta 1 4 d xylosidic linkage of xylan which is a major constituent of hemicelluloses These days xylanase are the enzymes on demand in pulp and paper industry But for product enhancement they need cellulase free xylanase samples collected from the waste yard of food ndustry First CSPY media was prepared For enhancing the xylanase producing ability wood scrapings were used as xylan substrate From the first stage screening actinomycete culture is obtained that has shown normal level cellulase free xylanase activity For higher level activity other natural substrates like corn cobs baggaserice bran and pure xylan are used for optimization This optimization process may enhance the production of cellulase free xylanase that could industrially fruitful in better pulp bleaching Cellulase assay is done to confirm the absence of cellulase in the strains as cellulase free Xylanase is required Strain improvement of the selected strains is done with EtBr technique and UV radiation to compare which technique is more fruitful as enhancing the production of required enzyme
