Autonomic Nervous System and Cardiovascular Diseases: From Brain to Heart Lilei Yu, Hong Jiang, Yan Yao, Deyong Long, Sunny Po, 2022-05-25 Arabidopsis Protocols Jose J. Sanchez-Serrano, Julio Salinas, 2013-09-21 Arabidopsis Protocols Third Edition compiles some of the most recent methodologies developed to exploit the Arabidopsis genome These methodologies cover from the guided access to public resources to genetic cell biology biochemical and physiological techniques including both those that are widely used as well as those novel techniques likely to open up new avenues of knowledge in the future In addition considering the recent unparalleled progress of the omics tools in Arabidopsis leading experts have contributed sections on genome transcriptome proteome metabolome and other whole system approaches Arabidopsis thaliana is acknowledged as the most important plant model system by the scientific community and Arabidopsis research has fundamentally influenced our understanding of the basic biology and ecology of plants Written in the successful Methods in Molecular Biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible protocols and notes on troubleshooting and avoiding known pitfalls Authoritative and easily accessible Arabidopsis Protocols Third Edition seeks to serve both experienced researchers and beginners with its detailed methodologies on this burgeoning scientific field **Challenges and Conundrums in Cannabinoid-Based Treatments for Epilepsy Syndromes and Associated Neurobehavioral Comorbidities** Dolores E. López García, Ricardo Gómez-Nieto, Norberto Garcia-Cairasco, 2022-01-05 **Mechanisms and New Targets for the Treatment of Chronic Pain** Milica S. Prostran, Francisco R. Nieto, Sonja Maksim Vuckovic, 2020-12-03 Acute pain has a physiological protective role in preventing tissue damage However pain can become chronic due to a multitude of pathophysiological states such as trauma inflammation neural injury viral infection cancer autoimmune diseases and vascular and metabolic disorders These pathological states can trigger alterations of the pain pathways that can lead to hypersensitivity and in such circumstances pain loses its protective role and instead becomes persistent and debilitating affecting seriously to the quality of life of patients Chronic pain is one of the most important health problems worldwide It has been estimated that 10% of adults are diagnosed with chronic pain each year However despite the high prevalence of chronic pain its management is still no fully satisfactory probably due to the variety of chronic pain conditions with different etiologies neuropathic visceral and musculoskeletal pain and because their pathophysiological mechanisms are only partially known Therefore there is a huge need for new effective therapies for the control and or prevention of the different types of chronic pain Chronic pain is associated with plastic changes in pain circuits of the peripheral and central nervous system including changes in the expression of ion channels neurotransmitters and receptors In addition there is growing consensus on non neuronal mechanisms that can amplify or resolve chronic pain and cells traditionally thought to act just as coordinators of the inflammatory response such as immune and glial cells are now accepted as real modulators of pain

signaling In this regard animal models of persistent pain such as models of neuropathic and visceral pain and models of arthritis are helping to elucidate our understanding of the pathogenesis of chronic pain and make it possible to test experimental treatments

The Role of Microbial Communities in Tropical Ecosystems Silvia Pajares,Brendan J.M. Bohannan,Valeria Souza,2017-01-13 Tropical ecosystems are different in important ways from those of temperate regions They are a major reservoir of plant and animal biodiversity and play important roles in global climate regulation and biogeochemical cycling They are also under great threat due to the conversion of tropical ecosystems to other uses Thus in the context of global change it is crucial to understand how environmental factors biogeographic patterns and land use changes interact to influence the structure and function of microbial communities in these ecosystems The contributions to this Research Topic showcase the current knowledge regarding microbial ecology in tropical ecosystems identify many challenges and questions that remain to be addressed and open up new horizons in our understanding of the environmental and anthropological factors controlling microbial communities in these important ecosystems
