

Phylogenetic Trees

How do the changes in gene sequences allow us to reconstruct the evolutionary relationships between related species?

Why?

The saying "Don't judge a book by its cover." could be applied to the topic of evolution. For example, humans share 75% of their DNA with chickens. Biologists point to this as evidence that humans and chickens once shared a common ancestor. The advent of DNA technology has given scientists the tools with which to examine how closely related certain species are. DNA analysis allows scientists to construct phylogenetic trees whose branches link together the relatedness of different organisms.

Model 1 – Phylogenetic Trees

1. Refer to Model 1.
 - a. How long ago did the common ancestor of all the organisms on this phylogenetic tree exist?
 - b. Which two lines diverged 30 million years ago?
 - c. List all modern descendants of the organism that was alive at the point indicated by the asterisk.

Social Computing and Behavioral Modeling Huan Liu, John Salerno, Michael J. Young, 2009-04-05 Social computing is concerned with the study of social behavior and social context based on computational systems Behavioral modeling reproduces the social behavior and allows for experimenting scenario planning and deep understanding of behavior patterns and potential outcomes The pervasive use of computer and Internet technologies provides an unprecedented environment of various social activities Social computing facilitates behavioral modeling in model building analysis pattern mining and prediction Numerous interdisciplinary and interdependent systems are created and used to represent the various social and physical systems for investigating the interactions between groups communities or nations This requires joint efforts to take advantage of the state of the art research from multiple disciplines social computing and behavioral modeling in order to document lessons learned and develop novel theories experiments and methodologies in terms of social physical psychological and governmental mechanisms The goal is to enable us to experiment create and recreate an operational environment with a better understanding of the contributions from each individual discipline forging joint interdisciplinary efforts This is the second international workshop on Social Computing Behavioral Modeling and Prediction The submissions were from Asia Australia Europe and America Since SBP09 is a single track workshop we could not accept all the good submissions The accepted papers cover a wide range of interesting topics *Princeton Review AP Environmental Science Premium Prep, 19th Edition* The Princeton Review, 2024-08-06 Make sure you're studying with the most up to date prep materials Look for the newest edition of this title The Princeton Review AP Environmental Science Premium Prep 20th Edition ISBN 9780593518472 on sale August 2025 Publisher's Note Products purchased from third party sellers are not guaranteed by the publisher for quality or authenticity and may not include access to online tests or materials included with the original product

Rhodes, 2004 This introductory textbook on mathematical biology focuses on discrete models across a

variety of biological subdisciplines Biological topics treated include linear and non linear models of populations Markov models of molecular evolution phylogenetic tree construction genetics and infectious disease models The coverage of models of molecular evolution and phylogenetic tree construction from DNA sequence data is unique among books at this level Computer investigations with MATLAB are incorporated throughout in both exercises and more extensive projects to give readers hands on experience with the mathematical models developed MATLAB programs accompany the text Mathematical tools such as matrix algebra eigenvector analysis and basic probability are motivated by biological models and given self contained developments so that mathematical prerequisites are minimal

Species Tree Inference Laura Kubatko,L. Lacey Knowles,2023-03-14 An up to date reference book on phylogenetic methods and applications for evolutionary biologists The increasingly widespread availability of genomic data is transforming how biologists estimate evolutionary relationships among organisms and broadening the range of questions that researchers can test in a phylogenetic framework Species Tree Inference brings together many of today s leading scholars in the field to provide an incisive guide to the latest practices for analyzing multilocus sequence data This wide ranging and authoritative book gives detailed explanations of emerging new approaches and assesses their strengths and challenges offering an invaluable context for gauging which procedure to apply given the types of genomic data and processes that contribute to differences in the patterns of inheritance across loci It demonstrates how to apply these approaches using empirical studies that span a range of taxa timeframes of diversification and processes that cause the evolutionary history of genes across genomes to differ By fully embracing this genomic heterogeneity Species Tree Inference illustrates how to address questions beyond the goal of estimating phylogenetic relationships of organisms enabling students and researchers to pursue their own research in statistically sophisticated ways while charting new directions of scientific discovery

Emerging Applications of Algebraic Geometry Mihai Putinar,Seth Sullivant,2008-12-10 Recent advances in both the theory and implementation of computational algebraic geometry have led to new striking applications to a variety of fields of research The articles in this volume highlight a range of these applications and provide introductory material for topics covered in the IMA workshops on Optimization and Control and Applications in Biology Dynamics and Statistics held during the IMA year on Applications of Algebraic Geometry The articles related to optimization and control focus on burgeoning use of semidefinite programming and moment matrix techniques in computational real algebraic geometry The new direction towards a systematic study of non commutative real algebraic geometry is well represented in the volume Other articles provide an overview of the way computational algebra is useful for analysis of contingency tables reconstruction of phylogenetic trees and in systems biology The contributions collected in this volume are accessible to non experts self contained and informative they quickly move towards cutting edge research in these areas and provide a wealth of open problems for future research

Immune system modeling and analysis Ramit Mehr,Miles Davenport,2015-04-22 The rapid development of new methods for immunological data collection from multicolor flow cytometry through single cell imaging to deep sequencing presents us now for the first time with the ability to analyze and compare large amounts of immunological data in health aging and disease The exponential growth of these datasets however challenges the theoretical immunology community to develop methods for data organization and analysis Furthermore the need to test hypotheses regarding immune function and generate predictions regarding the outcomes of medical interventions necessitates the development of mathematical and computational models covering processes on multiple scales from the genetic and molecular to the cellular and system scales The last few decades have seen the development of methods for presentation and analysis of clonal repertoires those of T and B lymphocytes and phenotypic surface marker based repertoires of all lymphocyte types and for modeling the intricate network of molecular and cellular interactions within the immune systems This e Book which has first appeared as a Frontiers in Immunology research topic provides a comprehensive online open access snapshot of the current state of the art on immune system modeling and analysis
