Milton F. Searl, 2016-03-22 In 1973 a seminar was held by Resources for the Future to bring together the new and growing community of scholars researching into the general field of energy modelling Originally published in the same year this report gathers together all of the papers presented at that seminar in order to further spread the results of these studies with those who were unable to attend The papers cover a full range of techniques used for energy modelling whilst commenting on current government and industry models This title will be of interest to students of Environmental Studies Teaching about Energy John L. Roeder, 2008 **Using Rasch Modeling to Investigate a Learning Progression for Energy Ideas** Cari F. Herrmann-Abell, George E. DeBoer, 2016 Energy is a core concept in the teaching of science Therefore it is important to know how students thinking about energy develops so that elementary middle and high school students can be appropriately supported in their understanding of energy This study tests the validity of a proposed theoretical model of students growth of understanding about energy that moves from a phenomenological understanding to being able to explain phenomena using basic energy related concepts to being able to explain phenomena using more advanced energy related concepts often involving atomic molecular explanations The study examines results from the administration of 372 distractor driven multiple choice test items aligned to a wide range of energy ideas from energy forms and transformations to energy transfers to energy dissipation and degradation to energy conservation Over 20 000 students from across the U S participated in the study Rasch modeling provided linear measures of student performance and item difficulty For most of the 14 targeted energy ideas an analysis of the item difficulties validated the study s proposed theoretical model of the growth of understanding of the energy concept Additionally a cross sectional analysis of student performance revealed that the high school students outperformed the middle school students and the middle school students outperformed the elementary school students The National Energy Modeling System, 1994 The National Energy Modeling System NEMS is a computer based energy economy modeling system of US energy markets for the midterm period of 1990 to 2010 NEMS projects the production imports conversion consumption and prices of energy subject to assumptions on macroeconomic and financial factors world energy markets resource availability and costs behavioral and technological choice criteria cost and performance characteristics of energy technologies and demographics This report presents an overview of the structure and methodology of NEMS and each of its components The first chapter provides a description of the design and objectives of the system The second chapter describes the modeling structure The remainder of the report summarizes the methodology and scope of the component modules of NEMS The model descriptions are intended for readers familiar with terminology from economics operations research and energy modeling Additional background on the development of the system is provided in Appendix A of this report which describes the EIA modeling systems that preceded NEMS More detailed model documentation reports for all the NEMS modules are also available from EIA **Applied Data Analysis and Modeling for Energy Engineers and Scientists** T. and Scientists fills an identified gap in engineering and science education and practice for both students and practitioners. It demonstrates how to apply concepts and methods learned in disparate courses such as mathematical modeling, probability, statistics, experimental design, regression, model building, optimization, risk analysis, and decision making to actual engineering processes and systems. The text provides a formal structure that offers a basic, broad, and unified perspective while imparting the knowledge, skills, and confidence to work in data analysis and modeling. This volume uses numerous solved examples, published case studies from the author's own research, and well-conceived problems in order to enhance comprehension levels among readers and their understanding of the processes along with the tools.
