

**Environmental Science** (uses scientific approaches of observation and analysis to understand the natural systems around us)

## Chapter 1

- List several major **themes** in environmental science. **Water, air quality, and climate change**
- Explain the idea of sustainability and some of its aims.
- Why are scientists cautious about claiming absolute proof of particular theories?
- What is **critical thinking**, and why is it important in environmental science? **Stepping back to examine what you think and why you think it or why someone believes what they do. Acknowledging uncertainty is one part of critical thinking.**
- Why do we use **graphs** and data to answer questions in science? **Publicizing rates of change**
- List several examples of progress in environmental quality.
- Identify several people who helped shape our ideas of resource conservation and preservation - why did they promote these ideas when they did?
- Outline the steps of the scientific methods. **Helps us understand the world and make reasoned decisions.**

### 1. Observation and evaluation of factors

**Restoration** includes replanting, agroforestry (products like nuts and fruits w/ sustainable value), monitoring, protecting and rebuilding.

**Natural systems** – biodiversity, water resources, climate systems, cultural systems of knowledge, technology and ideas that shape the way we use and occupy the environment.

**Climate change** – Earth retains heat near the surface, that's why it is hot here and not in space. By 2100, the earth temp will rise 3 to 12 degrees Fahrenheit

**Clean water** – Most critical resource. 40% of the world's population's water demands exceed supplies.

**Air quality** – China and India air quality is worsening.

advances in tissue culture analytical and diagnostic methods increases in computational processing capabilities and a greater understanding of cell biology and molecular mechanisms of toxicity These technological developments have enhanced the range and information content of the toxicity endpoints detected and therefore the relevance of test systems and data interpretation while new techniques for non invasive diagnostic imaging and high resolution detection methods have permitted an increased role for human studies Several key examples of how these technologies are being harnessed to meet 21st century safety assessment challenges are provided including their deployment in integrated testing schemes in conjunction with kinetic modelling and in specialised areas such as inhalation toxicity studies The History of Alternative Test Methods in Toxicology uses a chronological approach to demonstrate how the use of alternative methods has evolved from their conception as adjuncts to traditional animal toxicity tests to replacements for them This volume in the History of Toxicology and Environmental Health series explores the history of alternative test development validation and use with an emphasis on humanity and good science in line with the Three Rs Replacement Reduction Refinement concept expounded by William Russell and Rex Burch in 1959 in their now classic volume The Principles of Humane Experimental Technique The book describes the historical development of technologies that have influenced the application of alternatives in toxicology and safety testing These range from single cell monocultures to sophisticated miniaturised and microfluidic organism on a chip devices and also include molecular modelling chemoinformatics and QSAR analysis and the use of stem cells tissue engineering and hollow fibre bioreactors This has been facilitated by the wider availability of human tissues advances in tissue culture analytical and diagnostic methods increases in computational processing capabilities and a greater understanding of cell biology and molecular mechanisms of toxicity These technological developments have enhanced the range and information content of the toxicity endpoints detected and therefore the relevance of test systems and data interpretation while new techniques for non invasive diagnostic imaging and high resolution detection methods have permitted an increased role for human studies Several key examples of how these technologies are being harnessed to meet 21st century safety assessment challenges are provided including their deployment in integrated testing schemes in conjunction with kinetic modelling and in specialised areas such as inhalation toxicity studies
