**Scientific and Technical Aerospace Reports** ,1995 **Solution of Superlarge Problems in Computational Mechanics** James H. Kane,2012-12-06 There is a need to solve problems in solid and fluid mechanics that currently exceed the resources of

current and foreseeable supercomputers The issue revolves around the number of degrees of freedom of simultaneous equations that one needs to accurately describe the problem and the computer storage and speed limitations which prohibit such solutions The goals of this symposium were to explore some of the latest work being done in both industry and academia to solve such extremely large problems and to provide a forum for the discussion and prognostication of necessary future directions of both man and machine As evidenced in this proceedings we believe these goals were met Contained in this volume are discussions of iterative solvers and their application to a variety of problems e g structures fluid dynamics and structural acoustics iterative dynamic substructuring and its use in structural acoustics the use of the boundary element method both alone and in conjunction with the finite element method the application of finite difference methods to problems of incompressible turbulent flow and algorithms amenable to concurrent computations and their applications Furthermore discussions of existing computational shortcomings from the big picture point of view are presented that include recommendations for future work

Distributed Computer-Aided Engineering Hojjat Adeli, Sanjay Kumar, 2020-09-23

Networking of personal computers and workstations is becoming commonplace in academic and industrial environments A cluster of workstations provides engineers with a familiar cost effective environment for high performance computing However workstations often have no dedicated link and communicate slowly on a local area network LAN such as the Ethernet Thus to effectively harness the parallel processing or distributed computing capabilities of workstations new algorithms need to be developed with a higher computation to communication ratio Distributed Computer Aided Engineering presents distributed algorithms for three fundamental areas finite element analysis design optimization and visualization providing a new direction in high performance structural engineering computing
