Hypervelocity Impacts in Space and Planetology J. A. M. McDonnell, 1997 Paperback This publication contains 36 papers taken from three symposia of COSPAR Scientific Commission B which took place during the Thirty first COSPAR Scientific Assembly held in Birmingham UK during July 1996. The major areas covered by the symposia and which form this volume are as follows: the particulate space environment problems in comparative planetology and laboratory investigations relevant to planetology; Papers on the particulate space environment reflect advances in evaluation of the space environment, the deeper understanding of hypervelocity impact phenomena and hold interest for the understanding of the natural environment and space debris; Papers on problems in comparative planetology investigate differences in impact melting on the surfaces of different planets, the geology of Alba Petra on Mars and attempts to interpret the geology of that region in terms of the geology of corona structures found on Venus; Papers concerning Ia.

Umberto Celano, 2019-08-01 The tremendous impact of electronic devices on our lives is the result of continuous improvements of the billions of nanoelectronic components inside integrated circuits (ICs). However, ultra-scaled semiconductor devices require nanometer control of the many parameters essential for their fabrication. Through the years, this created a strong alliance between microscopy techniques and IC manufacturing. This book reviews the latest progress in IC devices with emphasis on the impact of electrical atomic force microscopy (AFM) techniques for their development. The operation principles of many techniques are introduced and the associated metrology challenges described. Blending the expertise of industrial specialists and academic researchers, the chapters are dedicated to various AFM methods and their impact on the development of emerging nanoelectronic devices. The goal is to introduce the major electrical AFM methods.
