Teaching and Learning Proof Across the Grades Despina A. Stylianou, Maria L. Blanton, Eric J. Knuth, 2010-09-23 A Co Publication of Routledge for the National Council of Teachers of Mathematics NCTM In recent years there has been increased interest in the nature and role of proof in mathematics education with many mathematics educators advocating that proof should be a central part of the mathematics education of students at all grade levels This important new collection provides that much needed forum for mathematics educators to articulate a connected K 16 story of proof Such a story includes understanding how the forms of proof including the nature of argumentation and justification as well as what counts as proof evolve chronologically and cognitively and how curricula and instruction can support the development of students understanding of proof Collectively these essays inform educators and researchers at different grade levels about the teaching and learning of proof at each level and thus help advance the design of further empirical and theoretical work in this area By building and extending on existing research and by allowing a variety of voices from the field to be heard Teaching and Learning Proof Across the Grades not only highlights the main ideas that have recently emerged on proof research but also defines an agenda for future study

Teaching As A Reflective Practice Ian Westbury, Stefan Hopmann, Kurt Riquarts, 2012-08-06 This volume presents a mix of translations of classical and modern papers from the German Didaktik tradition newly prepared essays by German scholars and practitioners writing from within the tradition and interpretive essays by U S scholars It brings this tradition which virtually dominated German curricular thought and teacher education until the 1960s when American curriculum theory entered Germany and which is now experiencing a renaissance to the English speaking world where it has been essentially unknown The intent is to capture in one volume the core at least of the tradition of Didaktik and to communicate its potential relevance to English language curricularists and teacher

educators It introduces a theoretical tradition which although very different in almost every respect from those we know offers a set of approaches that suggest ways of thinking about problems of reflection on curricular and teaching praxis the core focus of the tradition which the editors believe are accessible to North American readers with appropriate translation These ways of thinking and related praxis are very relevant to notions such as reflective teaching and the discourse on teachers as professionals By raising the possibility that the new tradition of Didaktik can be highly suggestive for thinking through issues related to a number of central ideas within contemporary discourse and for exploring the implications of these ideas for both teacher education and for a curriculum theory appropriate to these new contexts for theorizing this book opens up a gold mine of theoretical and practical possibilities
