The Vitamin Book Harold M. Silverman,Joseph Romano,Gary Elmer,2009-12-23 America s Most Reliable Vitamin Guide Completely Updated We ve all heard about the miraculous curative and preventive powers of vitamins minerals and herbal remedies Now the new revised The Vitamin Book compiled by pharmacological experts cuts through the confusion so you learn what to take and why Here is authoritative and up to date scientific information on exactly what vitamins minerals and herbal remedies can do for you You ll find Detailed descriptions of vitamins minerals trace elements and electrolytes including daily requirements dosages therapeutic uses and more The latest research on St John s wort echinacea CoQ10 DHEA and other popular herbal and dietary supplements An essential guide to brand name multivitamins found in your supermarket or health food store Specific recommendations for children athletes seniors and pregnant or postmenopausal women Guidelines for safe supplement use including megadosing and critical drug interactions The nutrient content of hundreds of common foods including popular fast foods How computer programs can monitor your vitamin and mineral intake And much much more *Biobetters* Amy Rosenberg,Barthélemy Demeule,2015-08-21 Biobetters Protein Engineering to Approach the Curative discusses the optimization of protein therapeutic products for treatment of human diseases It is based on the fact that though numerous important therapeutic protein products have been developed for life threatening and

chronic diseases that possess acceptable safety and efficacy profiles these products have generally not been reexamined and modified for an improved clinical performance with enhancements both to safety and efficacy profiles Advances in protein engineering coupled with greatly enhanced understanding of critical product quality attributes for efficacy and safety make it possible to optimize predecessor products for clinical performance thereby enhancing patient quality of life and with the potential for great savings in health care costs Yet despite such knowledge there is little movement towards such modifications This book examines engineering protein therapeutic products such that they exhibit an optimal not just an adequate clinical performance profile Two product classes therapeutic enzymes for lysosomal storage diseases enzyme replacement therapies ERT and monoclonal antibodies mAbs are used as examples of what modifications to such proteins could be made to enhance clinical performance closer to a cure as it were For ERT the key to optimizing clinical performance is to ensure the ERT is endowed with moieties that target the protein to the relevant target tissue Thus for Gaucher Disease our best example of how to optimize an ERT to address a disease that manifests in specific target tissues macrophages and monocytes the enzyme has been extensively modified to target macrophages For diseases such as Pompe Disease largely a disorder of muscle optimal performance of ERT will depend on endowing the enzyme with the ability to be taken up via the Mannose 6 Phosphate Receptor and so one of the chapters in the book will discuss such approaches Moreover a major failure of biotechnology based products is to gain access to the CNS a key target tissue in numerous diseases Thus a chapter has been devoted to strategies to access the CNS Additionally immune responses to therapeutic proteins can be highly problematic eliminating the efficacy of life saving or highly effective protein therapeutics This is especially poignant in the case of Pompe Disease wherein great improvement in muscle strength and functionality is lost following development of an immune response to the ERT with consequent patient deterioration and death Thus a chapter regarding protein engineering as well as other non clinical approaches to diminishing immunogenicity is a valuable part of the book Monoclonal antibodies mAbs can be engineered to bind targets relevant to a wide variety of diseases binding affinity however is only part of the equation and one of the chapters will present a molecular assessment approach that balances affinity with pharmacokinetics and manufacturability As with other proteins immunogenicity can be problematic being responsible for loss of efficacy of anti TNF mAbs often after prolonged successful treatment The authors will also share their perspective on the consequences of physico chemical modifications occurring to mAbs once they reach the circulation or their target a research area open to further development from a protein engineering as well as analytical perspective This book will also discuss novel platforms for protein therapeutics technologies that exceed mAbs with respect to potency and hence potentially efficacy These platforms consist largely of repeat domain proteins with very high affinity for their target ligands but while potentially more efficacious immunogenicity may be a major problem limiting use The economics surrounding the issue of biobetters is another high profile issue this final chapter will explore the incentives and disincentives for developing biobetters and

consider incentives that might make their pursuit more rewarding

Mobile Health Sasan Adibi, 2015-02-18 This book offers a comprehensive report on the technological aspects of Mobile Health mHealth and discusses the main challenges and future directions in the field It is divided into eight parts 1 preventive and curative medicine 2 remote health monitoring 3 interoperability 4 framework architecture and software hardware systems 5 cloud applications 6 radio technologies and applications 7 communication networks and systems and 8 security and privacy mechanisms The first two parts cover sensor based and bedside systems for remotely monitoring patients health condition which aim at preventing the development of health problems and managing the prognosis of acute and chronic diseases The related chapters discuss how new sensing and wireless technologies can offer accurate and cost effective means for monitoring and evaluating behavior of individuals with dementia and psychiatric disorders such as wandering behavior and sleep impairments The following two parts focus on architectures and higher level systems and on the challenges associated with their interoperability and scalability two important aspects that stand in the way of the widespread deployment of mHealth systems The remaining parts focus on telecommunication support systems for mHealth including radio technologies communication and cloud networks and secure health related applications and systems All in all the book offers a snapshot of the state of art in mHealth systems and addresses the needs of a multidisciplinary audience including engineers computer scientists healthcare providers and medical professionals working in both academia and the industry as well as stakeholders at government agencies and non profit organizations
