Making the complexities of green architecture accessible to the design studio. The Green Studio Handbook remains a must read for current and future architects. The heart of this book provides 43 comprehensive design strategies covering the building envelope, lighting, heating, cooling, energy and electricity, and water and waste, each with a description, key architectural issues, implementation considerations, and a step by step design procedure for integration early in the design process. Each design strategy has been thoroughly reviewed and updated to reflect the latest evidence based guidance, best practices and standards in consideration of all climatic zones. In addition to more than 80 building examples provided throughout, ten in depth case studies illustrate successful integration of numerous strategies. All case studies are brand new to this fourth edition and include a wide range of building types from the USA, Colombia, Rwanda, Malaysia, Denmark, Bhutan, Canada, and Australia. Envelope design strategies have been significantly revised and expanded to include new strategies on Foundation systems for the reduction of embodied carbon, Framing systems using mass timber, bamboo and other natural material based systems, Low complexity wall systems using natural elements such as earth, lime, straw and hemp, High complexity wall systems for enhanced thermal performance and strength, Additional roofing systems beyond green roofs.
