Mixed Effects Models and Extensions in Ecology with R Alain Zuur, Elena N. Ieno, Neil Walker, Anatoly A. Saveliev, Graham M. Smith, 2009-03-05 Building on the successful Analysing Ecological Data 2007 by Zuur Ieno and Smith the authors now provide an expanded introduction to using regression and its extensions in analysing ecological data As with the earlier book real data sets from postgraduate ecological studies or research projects are used throughout The first part of the book is a largely non mathematical introduction to linear mixed effects modelling GLM and GAM zero inflated models GEE GLMM and GAMM The second part provides ten case studies that range from koalas to deep sea research These chapters provide an invaluable insight into analysing complex ecological datasets including comparisons of different approaches to the same problem By matching ecological questions and data structure to a case study these chapters provide an excellent starting point to analysing your own data Data and R code from all chapters are available from www highstat com Mixed Effects Models and Extensions in Ecology with R. Alain F. Zuur, Elena N. Ieno, Neil J. Walker, Anatoly A. Saveliev, Graham M. Smith, 2011 A Beginner's Guide to R Alain Zuur, Elena N. Ieno, Erik Meesters, 2009-06-24 Based on their extensive experience with teaching R and statistics to applied scientists the authors provide a beginner's guide to R To avoid the difficulty of teaching R and statistics at the same time statistical methods are kept to a minimum The text covers how to download and install R import and manage data elementary plotting an introduction to functions advanced plotting and common beginner mistakes This book contains everything you need to know to get started with R Spatial and Spatio-temporal Bayesian Models with R - INLA Marta Blangiardo, Michela Cameletti, 2015-06-02 Spatial and Spatio Temporal Bayesian Models with R INLA provides a much needed practically oriented innovative presentation of the combination of Bayesian methodology and spatial statistics The authors combine an introduction to Bayesian theory and methodology with a focus on the spatial and spatio temporal models used within the Bayesian framework and a series of practical examples which allow the reader to link the statistical theory presented to real data problems. The numerous examples from the fields of epidemiology biostatistics and social science all are coded in the R package R INLA which has proven to be a valid alternative to the commonly used Markov Chain Monte Carlo simulations **R-ticulate** Martin Bader, Sebastian Leuzinger, 2024-07-08 An accessible learning resource that develops data analysis skills for natural science students in an efficient style using the R programming language R ticulate A Beginner's Guide to Data Analysis for Natural Scientists is a compact example based and user friendly statistics textbook without unnecessary frills but instead filled with engaging relatable examples practical tips online exercises resources and references to extensions all on a level that follows contemporary curricula taught in large parts of the world The content structure is unique in the sense that statistical skills are introduced at the same time as software programming skills in R This is by far the best way of teaching from the authors experience Readers of this introductory text will find Explanations of statistical concepts in simple easy to understand language A variety of approaches

to problem solving using both base R and tidyverse Boxes dedicated to specific topics and margin text that summarizes key points A clearly outlined schedule organized into 12 chapters corresponding to the 12 semester weeks of most universities While at its core a traditional printed book R ticulate A Beginner's Guide to Data Analysis for Natural Scientists comes with a wealth of online teaching material making it an ideal and efficient reference for students who wish to gain a thorough understanding of the subject as well as for instructors teaching related courses **GlobalSoilMap** Dominique Arrouays,Neil McKenzie,Jon Hempel,Anne Richer de Forges,Alex B. Statistics for Linguists: An Introduction Using R Bodo Winter,2019-10-30 Statistics for Linguists An Introduction Using R is the first statistics textbook on linear models for linguistics. The book covers simple uses of linear models through generalized models to more advanced approaches maintaining its focus on conceptual issues and avoiding excessive mathematical details. It contains many applied examples using the R statistical programming environment Written in an accessible tone and style this text is the ideal main resource for graduate and advanced undergraduate students of Linguistics statistics courses as well as those in other fields including Psychology Cognitive Science and Data Science

Experimental Design and Data Analysis for Biologists Gerry P. Quinn, Michael J. Keough, 2023-09-07 Applying statistical concepts to biological scenarios this established textbook continues to be the go to tool for advanced undergraduates and postgraduates studying biostatistics or experimental design in biology related areas Chapters cover linear models common regression and ANOVA methods mixed effects models model selection and multivariate methods used by biologists requiring only introductory statistics and basic mathematics Demystifying statistical concepts with clear jargon free explanations this new edition takes a holistic approach to help students understand the relationship between statistics and experimental design Each chapter contains further reading recommendations and worked examples from today s biological literature All examples reflect modern settings methodology and equipment representing a wide range of biological research areas These are supported by hands on online resources including real world data sets full R code to help repeat analyses for all worked examples and additional review questions and exercises for each chapter How to be a Quantitative Ecologist Jason Matthiopoulos, 2011-04-25 Ecological research is becoming increasingly quantitative yet students often opt out of courses in mathematics and statistics unwittingly limiting their ability to carry out research in the future This textbook provides a practical introduction to quantitative ecology for students and practitioners who have

realised that they need this opportunity The text is addressed to readers who haven t used mathematics since school who were perhaps more confused than enlightened by their undergraduate lectures in statistics and who have never used a computer for much more than word processing and data entry From this starting point it slowly but surely instils an understanding of mathematics statistics and programming sufficient for initiating research in ecology The book s practical value is enhanced by extensive use of biological examples and the computer language R for graphics programming and data analysis Key Features Provides a complete introduction to mathematics statistics and computing for ecologists Presents a wealth of ecological examples demonstrating the applied relevance of abstract mathematical concepts showing how a little technique can go a long way in answering interesting ecological questions Covers elementary topics including the rules of algebra logarithms geometry calculus descriptive statistics probability hypothesis testing and linear regression Explores more advanced topics including fractals non linear dynamical systems likelihood and Bayesian estimation generalised linear mixed and additive models and multivariate statistics R boxes provide step by step recipes for implementing the graphical and numerical techniques outlined in each section How to be a Quantitative Ecologist provides a comprehensive introduction to mathematics statistics and computing and is the ideal textbook for late undergraduate and postgraduate courses in environmental biology With a book like this there is no excuse for people to be afraid of maths and to be ignorant of what it can do Professor Tim Benton Faculty of Biological Sciences University of Leeds UK **Biostatistical Design and Analysis** Using R Dr Murray Logan, 2011-09-20 R the statistical and graphical environment is rapidly emerging as an important set of teaching and research tools for biologists This book draws upon the popularity and free availability of R to couple the theory and practice of biostatistics into a single treatment so as to provide a textbook for biologists learning statistics R or both An abridged description of biostatistical principles and analysis sequence keys are combined together with worked examples of the practical use of R into a complete practical guide to designing and analyzing real biological research Topics covered include simple hypothesis testing graphing exploratory data analysis and graphical summaries regression linear multi and non linear simple and complex ANOVA and ANCOVA designs including nested factorial blocking spit plot and repeated measures frequency analysis and generalized linear models Linear mixed effects modeling is also incorporated extensively throughout as an alternative to traditional modeling techniques. The book is accompanied by a companion website www wiley com go logan r with an extensive set of resources comprising all R scripts and data sets used in the book additional worked examples the biology package and other instructional materials and links Integrated Water Resources Research Jason A. Hubbart, 2021-05-20 Anthropogenic and natural disturbances to freshwater quantity and quality are a greater issue for society than ever before To successfully restore water resources requires understanding the interactions between hydrology climate land use water quality ecology and social and economic pressures This Special Issue of Water includes cutting edge research broadly addressing investigative areas related to experimental study designs and modeling freshwater pollutants of

concern and human dimensions of water use and management Results demonstrate the immense globally transferable value of the experimental watershed approach the relevance and critical importance of current integrated studies of pollutants of concern and the imperative to include human sociological and economic processes in water resources investigations In spite of the latest progress as demonstrated in this Special Issue managers remain insufficiently informed to make the best water resource decisions amidst combined influences of land use change rapid ongoing human population growth and changing environmental conditions There is thus a persistent need for further advancements in integrated and interdisciplinary research to improve the scientific understanding management and future sustainability of water resources Linguistics with R Stefan Th.
