Quantitative Anaesthesia K. van Ackern, H. Frankenberger, E. Konecny, K. Steinbereithner, 2012-12-06 Quantitative anaesthesia exact registration of the degree of anaesthesia has long been the anaesthetist's dream. Such precision could decrease the risk for the patient. Can this dream now be realized in the foreseeable future? And can the quantification be technically verified? This workshop was organized for these questions to be discussed by a group of experts. Schleswig Holstein was a logical location for such a gathering. Medical and associated technical advances have socioeconomic consequences in Schleswig Holstein; there are nowadays more jobs in medical technology than in the traditional shipbuilding industry. The encouragement of medical research and related technical innovation is thus a central component of public policy. One result of this emphasis was the recent setting up of a study group on medical technology, one of the aims of which is to provide a forum in Schleswig Holstein for meetings such as this. The intention is to consolidate Schleswig Holstein's reputation as a centre for both medical technical development and scientific discussion. The organizers of this scientific workshop thank the Schleswig Holstein Ministry of Economics and Transport and Drägerwerk AG for their support.

**Polyphenylene Oxide and Modified Polyphenylene Oxide Membranes** Geeta Chowdhury, Boguslaw Kruczek, Takeshi Matsuura, 2001-10-31 Fluid membrane material interfaces, morphologies of membrane surface and the sub layer underneath the membrane surface and fluid transport through the membrane governed by the above interface and morphology parameters and driving forces involved in process operation. All these three aspects together constitute the fundamental physico-chemical and engineering basis for the practical success of Membrane Separation Technology (MST) in all its applications. Quantitative data on the above interface and morphology parameters and applicable transport equations involving the above parameters are needed for membrane design, specification of membranes, modules and systems and prediction of their performance for any given separation application. Even though more than 40 years have elapsed since the emergence of the field of MST, there are very few books which deal with all the above three aspects of the subject in an integrated manner. This simply shows that the field of MST is still in its early stages of development and only a small fraction of its vast potential has been practically realized to date. Still, what has already accomplished is extraordinary both in its scope and in its impact on scientific research and service to society at large.

Gyroid Optical Metamaterials James A. Dolan, 2018-11-04 This thesis explores the fabrication of gyroid-forming block copolymer templates and the optical properties of the resulting gyroid optical metamaterials, significantly contributing to our understanding of both. It demonstrates solvent vapour annealing to improve the long range order of the templates and investigates the unique crystallisation behaviour of their semicrystalline block. Furthermore, it shows that gyroid optical metamaterials that exhibit only short range order are optically equivalent to nanoporous gold and that the anomalous linear dichroism of gyroid optical metamaterials with long range order is the result of the surface termination of the bulk gyroid morphology. Optical metamaterials are artificially

engineered materials that by virtue of their structure rather than their chemistry may exhibit various optical properties not otherwise encountered in nature e.g. a negative refractive index. However, these structures must be significantly smaller than the wavelength of visible light and are therefore challenging to fabricate using traditional top-down techniques. Instead, a bottom-up approach can be used whereby optical metamaterials are fabricated via templates created by the self-assembly of block copolymers. One such morphology is the gyroid, a chiral continuous and triply periodic cubic network found in a range of natural and synthetic self-assembled systems. Vacuum Manual L. Holland, 2012-12-06. Vacuum apparatus is widely used in research and industrial establishments for providing and monitoring the working environments required for the operation of many kinds of scientific instruments and process plant. The vacuum conditions needed range from the relatively coarse vacuum requirements in applications covering diverse fields such as food packaging, dentistry, investment casting, vacuum forming, vacuum metallurgical processes, vacuum impregnation, molecular distillation, vacuum drying and freeze drying etc. to the other extreme involving the highest possible vacuum as in particle accelerators, space technology both in simulation and outer space and research studies of atomically clean surfaces and pure condensed metal films. Vacuum commences with the rough vacuum region i.e. from atmosphere to 100 Pa, passing through medium vacuum of 100 Pa to 0.1 Pa and high vacuum of 0.1 Pa to 1 JPa, 10 Pa until ultra-high vacuum is reached below 1 JPa to the limit of measurable pressure about 12 pPa.

**Chemical Vapor Deposition of Refractory Metals and Ceramics III: Volume 363** Bernard M. Gallois, Woo Y. Lee, Michael A. Pickering, 1995-04-05. CVD chemical vapor deposition technology is receiving much interest in the scientific community in particular for synthesizing new materials with tailored chemical composition and physical properties that offer multiple functionality. Multiphase or multilayered films, functionally graded materials, FGMs, smart material structures and nanocomposites are just a few examples of the new classes of materials being produced via CVD. This third volume in the series from MRS offers an interdisciplinary perspective on technological issues relevant to CVD materials and processes and provides a forum for the exchange of new scientific results. Topics include fundamentals, modeling and diagnostics, process, microstructure, property relationships, diamond, cubic boron nitride and related materials, organometallic, chemical vapor deposition and novel approaches. **Chemical Vapor Deposition of Refractory Metals and Ceramics**, 1994.
