Young Children's Play and Environmental Education in Early Childhood Education Amy Cutter-Mackenzie, Susan Edwards, Deborah Moore, Wendy Boyd, 2014-01-18 In an era in which environmental education has been described as one of the most pressing educational concerns of our time further insights are needed to understand how best to approach the learning and teaching of environmental education in early childhood education In this book we address this concern by identifying two principles for using play based learning early childhood environmental education The principles we identify are the result of research conducted with teachers and children using different types of play based learning whilst engaged in environmental education Such play types connect with the historical use of play based learning in early childhood education as a basis for pedagogy In the book *Beyond Quality in ECE and Care* authors Dahlberg Moss and Pence implore readers to ask critical questions about commonly held images of how young children come to construct themselves within social institutions In similar fashion this little book problematizes the taken for grantedness of the childhood development project in service to the certain cultural narratives Cutter Mackenzie Edwards Moore and Boyd challenge traditional conceptions of play based learning through the medium of environmental education This book signals a turning point in social thought grounded in a relational view of environmental education as experiential intergenerational interspecies embodied learning in the third space As Barad says such work is based in inter actions that can account for the tangled spaces of agencies Through the deceptive simplicity of children's play the book stimulates deliberation of the real purposes of pedagogy and of schooling Paul Hart University of Regina Canada

What Brain Research Can Teach About Cutting School Budgets Karen D. Olsen,2010-02-18 With a strategy builder chart for reinvesting and reallocating dollars this unique resource applies brain research to the budgeting process to make decision making more objective The Kindergarten-primary Magazine Bertha Johnston,E. Lyell Earle,1912 **Science Literacy in Primary Schools and Pre-Schools** Haim Eshach,2006-08-12 Science is more than a compilation of facts and figures although one would not know that from observing classroom lessons in science in elementary schools in many parts of the world In fact there are those who argue that science is not appropriate subject content for the early grades of elementary school There are many schools in which science is simply not present in the earliest grades Even where science is taught in the earliest grades it is often a caricature of science that is presented to the children This book offers a vigorous reasoned argument against the perspective that science doesn't belong in the early grades It goes beyond that in offering a view of science that is both appropriate to the early grades and faithful to the nature of the scientific enterprise Dr Eshach is not a voice in the chorus that claims young children's developmental lack of readiness for such study He believes as do I that in order to learn science one must do science At the heart of the doing of science is the act of exploration and theory formation To do science we must explore the ways in which the world around us looks sounds smells feels and behaves Teaching Climate Change Mark Windschitl,2023-08-29 A practical guide to cultivating expansive understandings of climate change and environmental regeneration in K 12 students through classroom instructional practices and curricula Teaching Climate Change lays out a comprehensive NGSS aligned approach to climate change education that builds in depth knowledge of the subject empowers students and promotes a social justice mindset In this fortifying and inspiring work Mark Windschitl guides classroom teachers and educational leaders through an ambitious multilevel multidisciplinary framing of climate

change education as an integral element of school curricula Exuding hope for the future Windschitl emphasizes the big picture of research informed teaching about climate change He presents real life classroom examples that illustrate not only key STEM concepts such as carbon cycles and the greenhouse effect biodiversity and sustainability but also broader issues including the countering of misinformation decarbonizing solutions the centering of human stories and the advancement of equity and environmental justice Windschitl offers keen advice for using methods such as storytelling project based learning and models of inquiry backed by authoritative evidence as core strategies in science teaching and learning He also addresses the social emotional toll that discussion of the climate crisis may exact on both students and teachers This timely book equips teachers to approach climate education with the urgency and empathy that the topic requires and shows how the classroom can inspire students to activism
