Hilmy Sally,Charles L. Abernethy,2011-10-21 Only 4 percent of arable land in sub Saharan Africa is irrigated using just 2
percent of the available water resources Furthermore 18 percent of the area equipped for irrigation is not utilized at all and
the intensity of use varies between 50 percent and 80 percent This highlights the huge potential available for intensifying
and expanding irrigated area provided that the investments required can be successfully mobilized However it must be noted
that if investments in irrigation are to yield satisfactory returns investments must also be made in a series of related
activities Current global figures for the amount of private investment in irrigation confirm that good returns can indeed be
achieved Prospects for sub Saharan Africa would be far more favorable if public development assistance particularly foreign
direct investments did not show declining trends Trado Indian Directory ,1968 **International Commerce** ,1963
